15.242 National Fire Plan - Rural Fire Assistance

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: (1) Long-term impacts of wildfire on fuel loads, vegetation composition, and potential fire behavior and management in sagebrush-dominated ecosystems. This project will quantify the long term influence of past fires (12-30 years) on fuel loads, vegetation composition, and subsequent wildfire behavior, effects, and management in the three dominant big sagebrush ecosystems of the Northern Great Basin and Columbia Plateau. (2) Programmatic Analysis of Fuel Treatments: from the landscape to the national level. This project will design and demonstrate a spatial planning system that generates cost effective fuel treatment (FT) programs at the landscape and national scales with regional extensions. We will demonstrate how FT programs can respond to changes in funding levels nationally and on a particular landscape. (3) Phase Dynamics of Wildland Fire Smoke Emissions and Their Secondary Organic Aerosols. This project is a detailed study examining the phase partitioning behavior of biomass burning emissions under scenarios applicable to both the laboratory and the field. Fiscal Year 2015: (1) Modeling long-term effects of fuel treatments on fuel loads and fire regimes in the Great Basin. The project will assess the efficacy of fuel management strategies at decadal time-scales by synthesizing existing data to develop inputs for a vegetation dynamics model, the Ecosystem Demography (ED) model. The purpose of using the process-based ED model is to provide alternative future scenarios of the sagebrush-steppe ecosystem of the Great Basin under changing climate and fire regimes. (2) Relations among cheatgrass-driven fire, climate, and sensitive-status birds across the Great Basin. This project will model current and future spatial interactions among cheatgrass cover and biomass, precipitation, and fire across the Great Basin and to model current and future cover of sagebrush and herbaceous vegetation. We further will examine how projected changes in fire regimes and fire and fuels treatments may affect habitat quality for and probability of occupancy of sensitive-status breeding birds. Additionally, we will use statistical change-point analyses⁹ to detect any abrupt, nonlinear temporal changes thresholds in projected vegetation cover, habitat quality, and occupancy¹⁰. Detection of ecological thresholds, if they exist, may suggest fuels treatments and restoration actions that will decrease the probability of entering into or remaining within undesirable ecological states. (3) Do perennial bunchgrasses competitively exclude *Bromus tectorum* in post-fire rehabilitation? This project will examine the distribution of *tectorum* and perennial bunchgrasses across plot, site, and landscapes scales on locations with and without post-fire rehabilitation using spatial analysis of photoquadrats. The spatial analyses will allow us to address the following research questions: a) Does seeding *Poa secunda*, *elymoides*, and *crisatum* after a fire reduce the dispersion of *tectorum* at the plot or site scale? b) Is the spatial distribution of grass species consistent among sites across landscapes?. Fiscal Year 2016: No current data available.

CRITERIA FOR SELECTING PROPOSALS:

Criteria used to select assistance proposals are based on their ability to reduce the risk of wildland fire to community values and to increase the capabilities of rural fire organizations, in the vicinity of Federal lands.

Projects that cooperatively supported common goals and interests in managing, developing and protecting federal and private land and water resources in an environmentally and economically sound manner.

The BLM continues to partner with Trinity County Resource Conservation District on the Weaverville Community Forest Stewardship project. This project has treated over 1,000 acres of forest adjacent to the community of Weaverville, California. Project objectives have been to thin the forest in the wildland urban interface and improve forest resilience. Timber value from the thinning has been used to offset the thinning of precommercial trees as well as trail maintenance of local hiking and biking trails. One of the primary employers in Weaverville is a lumber mill which relies on timber supplied from project like this to continue operation. Fiscal Year 2015: No Current Data Available. EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: The Parks, Trails and Natural Areas category includes the following funded and in progress projects. The Camp Success Preservation and Enhancement Project in White Pine County, Nevada, in existence since the 1940s, will provide continued use of the Camp and enhance the recreational and environmental education opportunities for youth and families in eastern Nevada. The existing outhouses will be removed and replaced with vault toilets. Shower facilities and ADA accessible outdoor living area near the lodge will upgrade and preserve this partnership facility. The land is owned by the U.S. Forest Service with the Camp itself being owned by White Pine County, Nevada. With the recent 20-year permit renewal by U.S. Forest Service the camp will continue to enhance the areas comprehensive economic development strategy while providing recreational and outdoor opportunities. The Warm Springs Natural Area Project in Clark County, Nevada is regionally significant as it contains more than 20 perennial springs that form the headquarters of the Muddy River. The site contains numerous landscapes including Mojave desert, riparian forest, mesquite woodlands, and alkali meadows through which 3.8 miles of the Muddy River wanders. These resources provide ideal habitat for a number of listed, threatened and sensitive species, including the endangered Moapa dace and the Southwestern Willow Flycatcher. The Doolittle Park Family Area Renovation Project in Clark County, Nevada will reinvigorate this older park space, encouraging sustainable living in the city's core. Heavy use in West Las Vegas, Nevada has resulted in deterioration of this family park. More modern playground equipment and relocation of playground equipment for ages two to five years old will provide a safer play area for children. Increasing tree canopy, improving the park entry point, and adding a senior citizens activity area will improve the family environment of this heavily utilized local park. Horseshoe pits, new BBQs, new sidewalks, new grass and irrigation system, a medium ramada, and new lighting, will complete the much needed renovations. Fiscal Year 2015: No Current Data Available. Fiscal Year 2016: No Current Data Available.

15.250 Regulation of Surface Coal Mining and Surface Effects of Underground Coal Mining; 15.252 Abandoned Mine Land Reclamation (AMLR) Program

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: In 2014, OSMRE awarded \$ 100,000 to Pathfinders Resource Conservation and Development Inc. (Pathfinders) for the Blizzard AML Reclamation Project. The Blizzard Reclamation Project is a 69.5-acre abandoned mine land (AML) site located in Mahaska County, Iowa. Pathfinders leveraged \$100,000 in OSMRE WCAP funding with \$1,004,144 in funding from project partners, Iowa Department of Agriculture and Land Stewardship, the Mahaska Soil and Water Conservation District, and Landowners. Pathfinders plan to grade acidic spoil piles with terraces, incorporate limestone and organic mulch to raise the soils pH, and establish permanent vegetation. These actions will neutralize the acidic spoil material and prevent acid mine drainage from polluting tributaries of Coal Creek.

After sixteen years, as a result of more than \$4 million in grants, nine mine drainage treatment systems and a land reclamation project, three miles of the once lifeless lower Kettle Creek watershed supports a healthy native brook trout population. This improved length of stream connects to 3 additional miles of headwater streams, for a total of six miles of native trout habitat. OSMREs support via the WCAP program allowed for \$ 462,524 of federal funding over several years to leverage partner funding of \$ 1,627,421 for a total \$ 2,089,945 toward this successful restoration effort. The provision of technical expertise, funding support and volunteer assistance came from OSMRE and many partners, including the Pennsylvania Department of Environmental Protection, the Pennsylvania Department of Conservation and Natural Resources, the National Fish and Wildlife Service, the Richard King Mellon Foundation, Hedin Environmental and the Kettle Creek Watershed Association. All applicable Federal and State clearances and permits must be secured. The project should propose to use proven or innovative technology that has a high probability of success and produce tangible results, e.g., fishery restored, stream miles improved, educational and community benefits, pollutants removed from the streams. Funds must be used for the construction phase of a project and there must be demonstrated public support for the project. Also, there must be a plan to address any ongoing operation/maintenance considerations.

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: While OSMRE does not directly fund "projects" the funding provided supports non-profit, voluntary, community watershed associations whose projects engage their communities in identifying AMD problems as well as potential solutions and address related watershed/community projects.

In an effort to seek ways to reignite and engage economic redevelopment in Wyoming County, WV, OSMRE/VISTA working at the Rural Appalachian Improvement League, Inc. (RAIL), and RAIL President Dewey Houck, gathered state and community leaders in Mullens, WV to discuss the future of agricultural education, farming, and land use in the county. The main focus of discussion was on the use of Abandoned Mine Lands (AML) and developing youth leadership opportunities in southern West Virginia. The idea is to convert AML areas to mass-yielding high-tunnel farms, which would provide food for local schools, revenue for local residents and opportunities for young farmers, an idea that met with resounding community support. Event participants heard from Agricultural Commissioner Walt Helmick (the first WV Agricultural Commissioner to visit Wyoming County), and a panel of state officials and community leaders. Community leaders and officials shared resources, program, knowledge, and possibilities for funding with local community members to drive this new initiative. With 22% of Wyoming County residents living at or below the poverty line, a program that utilizes Abandoned Mine Lands as important resources in creating community benefits can create sustainable enterprise in the county.

OSMRE/VISTA, serving with Friends of Deckers Creek (FODC) (Morgantown, WV) completed multiple projects focused on acid mine drainage (AMD), remediation, and public interpretation. Most notably, the VISTA completed the Richard Mine Community Report on the largest single source of contamination within the Deckers Creek watershed and the last serious AMD discharge to remain untreated. The report compiled the history of the mine, AMD chemistry and local geology, potential treatment methods and costs, and potential economic benefits. The report was funded through an EPA Urban Small Waters grant and serves as an important outreach tool for FODC in raising awareness of issues surrounding AMD discharge from the Richard Mine.

OSMRE/VISTA serving with the Schuylkill Headwaters Association (Pennsylvania), is continually finding ways to introduce new career opportunities to low-income students by partnering with local organizations.

One major partnership is with The Blue Mountain School District. Students from the middle and high school spent the day at the Silver Creek abandoned mine drainage (AMD) treatment system where they learned about the history of mining in the area, how AMD is formed, and how the Silver Creek system is working to clean the water. The students were split into two groups, half remaining at Silver Creek, where they participated in water quality testing activities including pH, iron content, dissolved oxygen, acidity, and alkalinity. The second group went to the main branch of the Schuylkill River to collect and identify macro invertebrates and learn how to take flow measurements on the stream. Fiscal Year 2015: Information not available. Fiscal Year 2016: Information not available.

CRITERIA FOR SELECTING PROPOSALS:

Each proposed watershed project must clearly enhance the sustainability of the watershed organization and must contribute directly to the remediation of acid mine drainage. Candidates must be able to organize their work, work well with community groups and on their own, have an understanding of acid mine drainage remediation and the national Clean Streams program, and write well.

FEDERAL AGENCY:

Bureau of Ocean Energy Management, Department of the Interior

AUTHORIZATION:

43 U.S.C. 1345 (e); 43 U.S.C. 1346 Section 20.

OBJECTIVES:

The Bureau of Ocean Energy Management (BOEM) provides major economic and energy benefits on a national and local level to the taxpayers, states and the American Indian community. The BOEM oversees the exploration and development of oil, natural gas and other minerals and renewable energy alternatives on the nations outer continental shelf. BOEM continues to look for better ways to serve the American people and to ensure that the Nation receives the best value for its resources now and into the future. The program not only supports decisions made within the Department of Interior, but also provides coastal States and local governments with the information necessary to ensure that all stages of offshore energy and mineral activities are conducted in a manner to protect both the human and natural environments. The Outer Continental Shelf Lands Act (OCSLA) Section 1346 mandates the conduct of environmental and socioeconomic studies needed for the assessment and management of environmental impacts on the human, marine, and coastal environments which may be affected by oil and gas or other mineral development. OCSLA Section 1345 authorizes the use of cooperative agreements with affected States to meet the requirements of OCSLA, including sharing of information, joint utilization of available expertise, formation of joint monitoring arrangements to carry out applicable Federal and State laws, regulations, and stipulations relevant to outer continental shelf operations both onshore and offshore. The purpose of the Environmental Studies Program is to obtain the information needed for the assessment and the management of environmental impacts; to predict impacts on marine biota; and to monitor the human, marine, and coastal environments to provide time series and data trend information.

Bureau of Safety and Environmental Enforcement, Department of the Interior

AUTHORIZATION:

43 U.S.C. 1345 (e); 43 U.S.C. 1346 Section 20.

OBJECTIVES:

The Bureau of Safety and Environmental Enforcement (BSEE) program provides major economic and energy benefits on a national and local level to the taxpayers and states. The Agency oversees the exploration and development of oil, natural gas and other materials and renewable energy alternatives on the Nation's outer continental shelf. BSEE continues to look for better ways to serve the American people and to ensure that the nation receives the best oversight and regulation of National resource development now and into the future. The program not only supports decisions made within the Department of the Interior, but also provides coastal states and local

governments with the information necessary to ensure that all stages of offshore energy and mineral activities are conducted in a manner to protect both the human and natural environments. The Outer Continental Shelf Lands Act (OCSLA) Sections 1347 and 1348 respectively mandate the development and enforcement of regulations that protect safety, health and the environment. OCSLA Section 1345 authorizes the use of cooperative agreements with affected States to meet the requirements of OCSLA, including sharing of information, joint utilization of available expertise, formation of joint monitoring arrangements to carry out applicable Federal and State laws, regulations, and stipulations relevant to outer continental shelf operations both onshore and offshore. TYPES OF ASSISTANCE:

Cooperative Agreements

USES AND USE RESTRICTIONS:

The assistance can be used to conduct technical research to satisfy the information needs associated with oil and gas, alternate energy and marine animal development on the outer continental shelf. Applications must be for technical research projects which are within the BSEE area of responsibility. The majority of funds are used to support research that will enhance understanding of exploration and production techniques to enhance safe operations and oil-spill prevention and cleanup from oil and gas, marine minerals, and alternate energy development projects. EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: The Long Beach Area Water Reclamation Project Alamitos Barrier Recycled Water Project Expansion, received \$1,034,968 in FY 2014 Title XVI funding to increase the effluent treatment capacity of the Leo J. Vander Lans Water Treatment Facility. The treated effluent is used to maintain the Alamitos Barrier, which is an engineered fresh water pressure ridge designed to protect the Central Groundwater Basin and Coastal Plains from seawater intrusion. This project will eliminate the need for potable water to be used in the Alamitos Barrier.

The City of San Jose, California San Jose Area Water Reclamation and Reuse Program received \$4,000,000 in FY 2014 Title XVI funding. This is a joint effort of local municipalities and water districts administered by the City of San Jose to serve recycled water throughout Santa Clara County. Recycled water is used for multiple purposes, including environmental restoration, urban agriculture, landscape and industry.

The Victor Valley Wastewater Reclamation Authority received \$3,000,000 in FY 2014 to construct two subregional water reclamation plants to serve water customers in the City of Hesperia and the Town of Apple Valley, California. The recycled water resulting from these plants will replace groundwater and water imported through the State Water Project from the Bay-Delta. Fiscal Year 2015: Information not available. Fiscal Year 2016: Information not available.

CRITERIA FOR SELECTING PROPOSALS:

Reclamation will place priority on funding projects that reduce existing water diversions or address specific water supply issues in a cost-effective manner, address environmental and water quality concerns, are economically justified, and meet other program goals.

15.506 WATER DESALINATION RESEARCH AND DEVELOPMENT PROGRAM

Water Desalination Act of 1996, Public Law 104-298, as amended, Reclamation Act of 1902, Sec 1 and Sec 2, and Public Law 111-11, Section 9509.

OBJECTIVES:

There are three goals for the program: (1) augment the supply of usable water in the United States; (2) understand the environmental impacts of desalination and develop approaches to minimize these impacts relative to other water supply alternatives; (3) develop approaches to lower the financial costs of desalination so that it is an attractive option relative to other alternatives in locations where traditional sources of water are inadequate.

The three principal parts of the program are: (1) perform research on desalination technologies and related issues to advance the state of the art forward (research and studies), and (2) conduct development and demonstration

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: A number of projects will address the connection between water use and energy use. For example, The Richmond Irrigation District in Utah will pipe approximately eight miles of open canal, install nine meters, and construct two hydropower facilities with a combined 300 kilowatt capacity. The project is

expected to result in annual water savings of 4,800 acre-feet.

Several projects will save energy through water conservation. For example, the Avra Valley Irrigation and Drainage District in Arizona will line 3.2 miles of open canal and will install flow meters and two new, more-efficient electric motors on irrigation pumps, expected to result in 525 acre-feet of water savings annually. The District estimates that completion of the project will decrease pumping needs and reduce energy consumption by approximately 2,635,918 kilowatt-hours per year.

Other projects are expected to make contributions to environmental restoration by conserving water or making other improvements that benefit endangered or threatened species. For example, in Oregon, the Central Oregon Irrigation District will undertake water management improvements with expected savings of 2,552 acre feet of water annually. Through a partnership with the Deschutes River Conservancy, 2,000 acre-feet of conserved water will be allocated as a permanent instream flow in a critical reach of the Crooked River.

Examples of all projects funded to date are available at <http://www.usbr.gov/WaterSMART/weeg/>. Fiscal Year 2015: Information not available. Fiscal Year 2016: Information not available.

CRITERIA FOR SELECTING PROPOSALS:

Projects should seek to conserve and use water more efficiently, increase the use of renewable energy and improve energy efficiency, protect endangered and threatened species, facilitate water markets, or carry out other activities to address climate-related impacts on water or prevent any water-related crisis or conflict.

OBJECTIVES:

Under this authority, Reclamation will fund various activities for the benefit of at-risk terminal lakes to provide water and assistance to a terminal lake to carry out research, support, and conservation activities for associated fish, wildlife, plant, and habitat resources in Nevada and California.

TYPES OF ASSISTANCE:

Project Grants (Cooperative Agreements or Contracts)

USES AND USE RESTRICTIONS:

Funding is directed to be used for terminal lakes and associated watersheds in the State of Nevada and California. For further information please contact the regional office.

Applicant Eligibility:

State and local public agencies, Indian tribes, nonprofit organizations, educational institutions, and individuals may submit a proposal which will be considered by Reclamation. Foreign entities and Federal agencies are not eligible to apply.

Beneficiary Eligibility:

State and local entities, public nonprofit institutions/organizations, other public institutions/organizations, Federally recognized Indian Tribal Governments, individuals, small businesses, profit organizations, private organizations, quasi-public nonprofit organizations, other private institutions/organization, general public, native American organizations, higher education institutions, irrigation districts, municipal water authorities, farmers/ranchers/agriculture producers, and land/property owners.

Credentials/Documentation:

(1) A detailed written technical proposal including background data regarding the applicant, technical approach proposed to accomplish the work, a scope of work that separates the work into major tasks, type of personnel implementing the proposal, experience in performing this type of work, benefits to be received by implementation of the project(s), environmental impact(s), timeline(s), the level of cooperation with other parties involved in the proposal, and other information that may be useful for proposal evaluation. (2) A detailed cost proposal by project including a budget covering labor categories, salaries and wages with estimated hours, fringe benefits, travel, equipment, supplies, subcontracts, indirect cost rates, other funding sources and commitments, cost-sharing, value of in-kind contributions of good and services, and a narrative discussion. 2 CFR 200, Subpart E - Cost Principles applies to this program.

Preapplication Coordination:

Funding is allowed for work that will be for the benefit of at-risk terminal lakes and to carry out research, support, and conservation activities for associated fish, wildlife, plant, and habitat resources in Nevada and California. An environmental NEPA document may be required depending on the nature of the proposal and its impact on the environment. Compliance with National Historic Preservation Act and Endangered Species Act may also be required.

Pre-application Coordination: Although it is not mandatory, Reclamation strongly encourages offerors to submit a pre-proposal to eliminate the possibility of submitting a full proposal that would not be considered for award. The pre-proposal should describe 1) how the proposal will provide benefits to a terminal lake or associated watershed, 2) the quantity of water anticipated to be provided if part of the proposal or benefit to the associated riparian and watershed resources, 3) the associated estimated cost, 4) potential environmental impacts, 5) state, local and other permits or approvals needed to implement the proposal. Pyramid Lake Pre-application Coordination: Initially pre-proposal solicitation announcement was issued by Reclamation; the initial solicitation occurred in FY05. No additional solicitation announcements have occurred.

This program is excluded from coverage under E.O. 12372. No additional solicitation is planned in FY14. An environmental impact statement is required for this program. An environmental impact assessment is required for this program. This program is excluded from coverage under E.O. 12372.

Application Procedures:

2 CFR 200, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards applies to this program. Funding is allowed for work for the benefit of at-risk terminal lakes and to carry out research, support, and conservation activities for associated fish, wildlife, plant, and habitat resources in Nevada and California. For Summit Lake, Reclamation will only accept proposals from the Summit Lake Paiute Tribe, since the lake is entirely within the reservation boundaries and any proposal affecting the lake would need the consent of the Tribe; the exception is if DTL funding is reprogrammed in another DTL grant for Summit Lake. For all other terminal lakes, Reclamation may accept applications after the applicant provides enough pre-application information to Reclamation to assure that the proposed work will be for the benefit of at-risk natural desert terminal lakes and associated riparian and watershed resources in Nevada and California or fund designated activities, the associated cost is reasonable, and it is likely Reclamation can satisfy its federal Indian trust, endangered species, environmental, and other responsibilities. Discretionary funding opportunities will be posted on Grants.gov. Submission of a complete technical proposal and a project budget proposal in accordance with the instructions in the FOA is mandatory. In addition, applicants must submit all applicable SF424 forms, which are referenced in the FOA. Reclamation does not anticipate accepting unsolicited

applications in FY14.

Award Procedure:

Terminal Lakes Proposals will be evaluated using a merit-based review process. Some past Pyramid Lake proposals were also reviewed on the basis of a competitive, merit-based review process, and were rated in accordance with the evaluation criteria stated in the FOA. Reclamation made awards to the highest-rated proposals based on the amount of funding available at that time. Reclamation reserves the right to prioritize projects based on availability of funds and to ensure balance among the program objectives listed in the FOA.

Deadlines:

Contact the headquarters or regional office, as appropriate, for application deadlines.

Range of Approval/Disapproval Time:

Contact Reclamation for the range of time when proposals are approved or disapproved.

Appeals:

Reclamation will, however, provide all applicants with information on why their proposals were not selected.

OBJECTIVES:

To provide financial and technical assistance to: (1) identify salt source areas; (2) develop project plans to carry out conservation practices to reduce salt loads; (3) install conservation practices to reduce salinity levels; (4) carry out research, education, and demonstration activities; (5) carry out monitoring and devaluation activities; and (6) to decrease salt concentration and salt loading which causes increased salinity levels within the Colorado River and to enhance the supply and quality of water available for use in the United States and the Republic of Mexico. Such programs shall consist of cost-effective measures and associated works to reduce salinity from saline springs, leaking wells, irrigation sources, industrial sources, erosion of public and private land, or other sources. For ARRA funded projects and in addition to the program objectives above, the section 3 of the ARRA states the following objectives:

- (1) To preserve and create jobs and promote economic recovery.
- (2) To assist those most impacted by the recession.
- (3) To provide investments needed to increase economic efficiency by spurring technological advances in science and health.
- (4) To invest in transportation, environmental protection, and other infrastructure that will provide long-term economic benefits.
- (5) To stabilize State and local government budgets, in order to minimize and avoid reductions in essential services and counterproductive state and local tax increases.

Credentials/Documentation:

Some projects may require compliance with the National Environmental Policy Act and Endangered Species Act. Information regarding whether these requirements must be met will be included in the funding opportunity announcement posted on www.grants.gov. 2 CFR 200, Subpart E - Cost Principles applies to this program.

Preapplication Coordination:

Environmental compliance for this program may be required depending on the scope of the specific project funded. This may result in the need for an environmental impact assessment or environmental impact statement prior to the commencement of project activities. An environmental impact statement is required for this program. An environmental impact assessment is required for this program. This program is eligible for coverage under E.O. 12372, "Intergovernmental Review of Federal Programs." An applicant should consult the office or official designated as the single point of contact in his or her State for more information on the process the State requires to be followed in applying for assistance, if the State has selected the program for review.

Funding opportunity announcements for this program, along with registration procedures, application packages and instructions, SF-424 forms and any other forms to be used to

submit application information, points of contact, and procedures for submitting applications will be available on www.grants.gov.

Award Procedure:

Reclamation will solicit proposals and award funding through a Funding Opportunity Announcement (FOA) process. The FOA will request proposals from public and private sectors that would control salinity based on cost per ton. The proposals will be ranked based on their cost effectiveness for preventing salt from entering the Colorado River system. The ranking would consider risk factors that might affect the project's performance. Upon receipt of applications/proposals by the date identified in the announcement(s), the applications will be reviewed to determine if application/proposal(s) are consistent with requirements identified in the announcements. The application/proposal(s) are reviewed against identified criteria by a Federal technical team of experts, that may include representatives of states as advisors.

Based on the review, a ranking will be defined. Negotiations will be conducted and/or awards will be made based on recommendations from the technical experts. Award will be based on those applications best meeting the needs of the program, including cost and risk factors.

Deadlines:

Contact the headquarters or regional office, as appropriate, for application deadlines.

Range of Approval/Disapproval Time:

Approximately 90 days.

Appeals:

Final award decisions are not subject to appeal; however, the Bureau of Reclamation will provide all applicants with information on why their proposals were not selected for award.

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: The Blue Cut/Mammoth Unit that was selected in the 2012 FOA. Reclamation has executed a cooperative agreement to provide \$5.5 million. This project will replace approximately 45.6 miles of earthen canals

and laterals with a pressurized pipeline system resulting in the reduction of 3,789 tons of salt per year in the Colorado River at an anticipated cost of approximately \$67.57 per ton. The pressurized pipeline will serve 5,680 acres resulting in additional on-farm salt savings. Construction began in 2014 and is expected to be completed in 2016. Fiscal Year 2015: No information available. Fiscal Year 2016: No information available.

CRITERIA FOR SELECTING PROPOSALS:

In 1984, the Salinity Control Act was amended to direct the Secretary of the Interior to give preference to units which reduce salinity at the least cost per unit of salinity reduction (or cost-effectiveness). Cost-effectiveness is defined as the Salinity Program's annual cost per ton of salt prevented from entering the Colorado River system. Conceptually, cost-effectiveness is analogous to determining the cost per mile to own and operate a car. That computation combines the annual expenses (loan payments, gas, maintenance, etc.) and divides by the miles traveled each year. The key to understanding this approach is to appreciate that the government evaluates all projects as if the money is borrowed from a loan institution and repaid in annual installments over the life of the project. This economic evaluation principle is required by the "Economic and Environmental Principles Guidelines for Water and Related Land Resources Implementation Studies", March 1983. This method lends consistency in the comparison of non-federally financed alternatives (which must borrow funds) to Federally financed projects. Each proposal will be evaluated by a application review committee in accordance with the following criteria and corresponding percentage weights: (a) Technical merit - those passing will be evaluated further, (b) Cost effectiveness 70 percent of the annual cost for each ton of salt load reduction, expressed in dollars per ton, (c) Performance risk 30 percent of performance risk will evaluate the cost and effectiveness risks of the proposal. More detailed information will be included in each funding announcement or may be obtained from the Salinity Control Program contacts listed above. For Recovery Act projects: The purposes are among others, to quickly and prudently commence activities that preserve and create jobs and to promote economic recovery, and to invest in transportation, environmental protection, and other infrastructure that will provide long-term economic benefits. To meet these purposes, Reclamation will allocate funds based on the criteria set forth in the Recovery Act and the accompanying conference report, and will target activities that quickly infuse money into the economy.

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: Cost-share cooperative agreements were awarded to a number of non-federal partners, such as states or counties, in an effort to facilitate planning and development of recreation and fish and wildlife facilities on various Bureau of Reclamation water project recreation areas. These projects were identified primarily through existing resource management plans (RMPs), budget availability, and in coordination with managing partners. Many of the projects funded promote active and health youth opportunities on public lands and waters through development and/or expansion of outdoor day-use and camping facilities, water access points to enjoy fisheries, etc. Provided below are just a few of the many examples of cost-share funded projects in Reclamation. Kansas Parks and Wildlife has embraced a vision to promote opportunities for youth/young adults. A multi-year cost-share project is focused on the development of a kids fishing pond to connect educational and recreational opportunities with kids and public lands. This project area is adjacent to day-use facilities for outdoor education programs, as well as near camping facilities to accommodate family outings. Reclamation partners in Nebraska and South Dakota are improving access and opportunities through the addition of fishing docks and piers, with one project addition for a kids-specific fishing dock to improve access to an existing fishing pond. North and South Dakota managing partners are providing shade shelters for visitors and planting vegetation/trees to improve habitat. Partners in Colorado are providing potable water and addressing critical improvements to camping restrooms and facilities.

Partner agencies with Oklahoma have provided critical support and project work to reduce hazardous fuels through prescriptive vegetation treatments, thereby promoting healthy successional and resilient vegetation layers and minimizing threat from wildland fire to facilities/infrastructure, public visitors and adjoining landowners. Oklahoma and Reclamation partnerships have also engaged youth organizations to build and maintain non-motorized nature trails/bike trails to accommodate increasing demand for diverse recreational opportunities on public lands. These projects represent some of GP Regions key accomplishments through the use of Title 28 Cost-Share dollars. These and aAll projects help meet Reclamation goals and objectives identified in resource management planning efforts, and are planned and implemented in cooperation with managing partners. Cost sharing many of these projects leverages federal funds, promotes shared stewardship responsibilities, advances the mission and goals of the agency, while promoting recreation opportunities and access to public lands. Local communities and partners benefit from the added investment in their local economies, and result in increased visitation and tourism dollars. Fiscal years 2013 and 2014 continued efforts throughout New Mexico, Colorado, and Utah to improve facilities and opportunities for the recreating public. Accomplishments include (1) Colorado (Rifle Gap Reservoir) Completion of accessibility improvements and park maintenance facilities, installation of shade shelters, and construction of additional campsites to accommodate increasing numbers of visitors, (2) New Mexico (Navajo Reservoir) Continued upgrades to aging and inadequate water and wastewater systems and electrical systems upgrades at Cottonwood and Pine sites, installation of accessible fishing piers at Cottonwood Campground, installation of a temporary AIS inspection station, and completion of accessibility improvements at Texas Hole. (3) Utah Completion of planning efforts and start of Phase I recreation rehabilitation program (Steinaker Reservoir), and completion of the redesign and construction of the entrance at Jordanelle Reservoir State Park to alleviate traffic congestion on Highway 40. This included the construction of a new entrance station, widening of entry road, addition of a second traffic lane, installation of accessible parking and a hardened walkway between features. Recreation rehabilitation at Starvation Lake State Park was completed with the entry station relocated closer to the park boundary to better accommodate traffic. The new entry station area includes both manned and self-service pay stations, parking lot and vault toilet.

As a result of a potential turnback at Grand Coulee North Dam Park, funds were utilized for O&M and repair public health and safety structures such as replace electrical systems and replace dilapidated wood and roof on structures. Howard Prairie Resort was a turn back from concession operations. Local

partner faces major rehabilitation and repairs so funding was used to replace old restroom with accessible model, accessible parking and access routes; continued improvements to the water and wastewater systems at Pine, Sims, and Cottonwood recreation areas (Navajo Reservoir); construction of accessible fishing piers at Cottonwood Campground (San Juan River) improvements to the visitor center at Brantley Lake State Park, New Mexico (completed 2013); phase II rehabilitation of recreation facilities at Starvation Lake State Park in Utah, including expansion of Mountain View Campground to increase capacity to meet demand (completed 2013); activities to begin reconstruction of the entry area at Jordanelle Reservoir, Utah, including new entrance station, widening of road to add a second lane to accommodate traffic volume, accessible parking and hardened walkway between features (2013); There were continued cost-share arrangements with States of Colorado, New Mexico, and Utah to rehabilitate facilities and perform accessibility retrofits, including continued improvements to the water and wastewater systems at Pine, Sims, and Cottonwood recreation areas (Navajo Reservoir); construction of accessible fishing piers at Cottonwood Campground (San Juan River) improvements to the visitor center at Brantley Lake State Park, New Mexico (completed 2013); phase II rehabilitation of recreation facilities at Starvation Lake State Park in Utah, including expansion of Mountain View Campground to increase capacity to meet demand (completed 2013); activities to begin reconstruction of the entry area at Jordanelle Reservoir, Utah, including new entrance station, widening of road to add a second lane to accommodate traffic volume, accessible parking and hardened walkway between features (2013). CRITERIA FOR SELECTING PROPOSALS:

Section 314(c) Projects - Criteria for funding projects have been established by Congress in the authorizing legislation (P.L. 102-575) at Section 314(c). Generally, these criteria require that projects restore damaged natural

ecosystems on public lands and waterways affected by Federal Reclamation projects in the upper Colorado River basin. In addition, priority is given to projects that assist recovery of endangered or sensitive species or ecosystems, allow reintroduction of native flora and fauna, control or eliminate exotic pest species, or provide enhanced conservation value to state and local government lands. A complete list of program criteria is available at the address listed in Information Contacts (:151). Projects that leverage grant funds with applicant funds, or in-kind services, will receive bonus consideration, but not automatic preference.

Specific evaluation criteria will be included in the annual funding opportunity announcement.

-The June Sucker Hatchery and JSRIP Projects are selected under recovery criteria established within the June Sucker Recovery Plan.

OBJECTIVES:

The Middle Rio Grande Endangered Species Collaborative Program (Program) is a collaborative effort consisting of 16 stakeholders including federal, state, and local governmental entities; Indian tribes and pueblos; and non-governmental organizations representing diverse interests working to support compliance with the Endangered Species Act (ESA). The Program is transitioning to a Recovery Implementation Program (RIP) and include it as a conservation measure in Reclamation's new biological assessment. A Long-Term Plan linked to Rio Grande silvery minnow (silvery minnow) and Southwestern willow flycatcher (flycatcher) endangered species recovery plans is also being updated to include the RIP. The purpose of the Program RIP is to protect and improve the status of endangered listed species along the Middle Rio Grande (MRG) by implementing certain recovery activities to benefit those species and their associated habitats and, simultaneously, to protect existing and future water uses while complying with applicable state and federal laws, including Rio Grande compact delivery obligations, and to serve as the ESA coverage vehicle for water uses and management actions in the Program area. Listed species means federally listed species under the ESA, with special

emphasis on the Rio Grande silvery minnow (silvery minnow) and the southwestern willow flycatcher (flycatcher).

CRITERIA FOR SELECTING PROPOSALS:

The Las Vegas Wash Coordination Committee has decided that the SNWA will be the lead agency for receiving funding for this program due to the high costs and types of environmental improvement and enhancement, and ability to maintain restoration projects. The Las Vegas Wash Program plays an important role in environmental and water resource issues in Southern Nevada. Historically, the Las Vegas was an ephemeral stream carrying storm flows from the Las Vegas Valley to Lake Mead and the Colorado River. Urban development over the past 60 years has resulted in the formation of the wetlands that helped remove nutrients from these wastewater flows. As the rate of discharges increased, erosion also increased, gradually destroying the existing natural treatment systems and wildlife habitat and creating a large delta in the Las Vegas Bay of Lake Mead. Accelerating erosion, declining water quality, and loss habitat are some of the more pressing issues. Proposals submitted will be reviewed and awarded based on priority fulfillment of the 44 action items identified in the Plan and the availability of funding appropriations.

RELATED PROGRAMS:

15.507 Water 2025

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: Desert LCC: The Environmental Defense Fund (EDF) will use modeling tools and data from the 2014 Minute 319 pulse flow to develop an integrated system that will assist with future pulse flow release experimental determinations. The Minute 319 pulse flow is a temporary release of water to mimic natural spring floods in the Colorado River Delta to study how best to restore native riparian habitat. The new system will integrate data and models such as environmental conditions and designed pulse flow releases with targeted environmental variables to predict the environmental reaction to future pulse flow releases, thereby supporting adaptive management and planning in the future. By linking data and models together into an integrated system, EDF intends to reduce the time required to analyze scenarios and to provide data that would help guide the pulse flow design.

Southern Rockies LCCs: The Museum of Northern Arizona will leverage tools previously developed through its Springs Stewardship Initiative to help resource managers in the southwestern U.S. collect, analyze, report upon, monitor and archive the complex and inter-related information associated with springs and spring-dependent species in the region. Building upon those past efforts, the project will include compilation of existing springs-related information to make the information more readily available online and further development of interactive online maps and climate change risk assessment tools of springs-dependent sensitive plant and animal species. This project builds on an effort funded in FY 2013 to complete similar work for the Desert LCC. Fiscal Year 2015: Information not available. Fiscal Year 2016: Information not available.

CRITERIA FOR SELECTING PROPOSALS:

Specific evaluation criteria will be included in the funding announcements posted on www.grants.gov. All applications will be evaluated using criteria that give priority to a project's technical merit, the relevance to the LCC, dissemination of results to Reclamation and LCC partners, connections to Reclamation activities and exceed the minimum 50 percent non-Federal cost-share requirement.

PROGRAM ACCOMPLISHMENTS:

Fiscal Year 2014: The primary objective of the Dixie Valley Ground Water Export Study is to determine how much water is available for export from Dixie Valley. The original plan of study included evaluating the feasibility of conveying the water to various points of use within Churchill County, Nevada. It was to be completed in three phases over a 5 year period, beginning in early 2009, concluding in 2014. The first phase included data collection/analysis to develop an understanding of the study areas hydrogeologic framework, ground-water flow, and water quality. The second phase was to include development of ground-water models for estimating hydrologic impacts and analyses of associated economic and environmental impacts. The third phase was contingent on Phase 2 results and would include pipeline design and cost estimating activities. Phase 1 is complete and reports of findings are either published or in publishing. The Phase 2 groundwater modeling is ongoing. The Phase 2 economic and environmental analyses, as well as the Phase 3 design and cost estimating work, will not be completed due to inadequate funds.

A one-year extension was requested and granted which postponed completion to January 25, 2015 and a second extension request is imminent. It is anticipated the extension request will be for 6 months and the project will be completed during July 2015. Fiscal Year 2015: No information available. EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: Under its award, the Maryland Department of Natural Resources worked on Health Investigations of Striped Bass and Other Fishes in Maryland Waters. The focus was to collect resident striped bass and to determine age-specific prevalence of mycobacteriosis; identify mycobacterial species and characterize bacterial flora in striped bass and to use epidemiology model(s) to examine disease dynamics (i.e. rates of change) over time using

ongoing MD striped bass disease database. The total project cost was \$200,812 (Federal - \$150,609; Non-federal - \$50,207).

The Delaware Division of Fish Wildlife carried out a project titled, The Age and Growth of Delaware Black Drum. This project characterized the age structure of Delaware's black drum spawning stock. Samples for aging were collected from existing Division of Fish and Wildlife, commercial and recreational fisheries sampling programs. Accurate age information necessary for future stock assessments, developing management plans, and understanding life history. Age structure characteristics provide an understanding of the lifespan of black drum needed to estimate natural mortality, an essential parameter for stock assessment. The total project cost was \$13,684 (Federal - \$10,263; Non-federal - \$3,421).

The Colorado Parks and Wildlife Department completed their second year of funding the Navajo boat ramp project. The original ramp was built by the US Bureau of Reclamation in 1963. The goal of this project was to resurface approximately 30,000 square feet of the existing Navajo boat ramp, a reinforced concrete structure 1470 feet long, 80 feet wide and 6 inches thick. Total project cost was \$400,000 (Federal - \$300,000; Non-federal - \$100,000). Fiscal Year 2015: The Minnesota Department of Natural Resources will use Sport Fish Restoration Program funds for its Statewide fisheries research grant. The States major research areas over the next 10 years include evaluating and fine tuning existing fishing regulations; the effects of these changes on the community; stocking effects on other species; new holistic approaches to fish management; new habitat improvement techniques; forecasts of impacts to sport fisheries due to future climate change; population assessment tools; Lake Superior salmonid assessments; and the long term monitoring on the effects of fish rearing and biomanipulation of wetlands.

Four Southeastern states (Alabama, Georgia, Missouri, and North Carolina) will work together on The Southeastern Cooperative Fish Disease Project. Many fish diseases are still poorly understood and improved methods are needed to detect, identify and treat fish pathogens. The benefits of this study will be reduced loss of fish to diseases, both in the wild and in State hatcheries.

New Hampshire Fish and Game Department's Aquatic Resources Education project continues to fund two main programs that teach aquatic ecology, aquatic resource management, and angler education to various audiences: the Watershed Education Program (WEP) and the Let's Go Fishing (LGF) Program. Total project cost is \$398,500 (Federal - \$298,500; Non-federal - \$99,500). Fiscal Year 2016: The Program has not yet selected projects for funding. The Program anticipates funding projects that increase sport fishing and boating opportunities through wise investment of excise tax dollars in sport fishery development, research, and management projects.

CRITERIA FOR SELECTING PROPOSALS:

The States, the District of Columbia, Commonwealths, or territorial agencies having lead responsibility for the management of their fish resources must submit the projects. If approved, projects must meet the basic criteria outlined in the regulations and the U.S. Fish and Wildlife Service Manual.

15.605 Sport Fish Restoration Program; 15.631 Partners for Fish and Wildlife

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: Increased native fish population numbers and expanded range are priority activities for delisting threatened and endangered species and preventing additional species listing. Habitat degradation and fragmentation have been identified as the leading cause for native fish population decline and range contraction. Impassable road crossing restricts native fish passage and excludes them from habitats upstream of the crossing. This project worked with the Dickinson County, KS, Public Works Department and successfully restored fish passage at 649 Paint Road where it intersects the Lyons Creek tributary, Dickinson County, KS. Evidence of fish passage objectives included spanning the creek with a structure that exceeded bankfull widths. Constructing channel spanning structures that exceed bankfull width were documented to facilitate fish passage. Fiscal Year 2015: Program has not yet selected projects for funding. Program anticipates funding projects that support the native aquatic species restoration and preservation through habitat restoration, science, and monitoring, and projects that reduce threats to their survival. Fiscal Year 2016: Program has not yet selected projects for funding. Program anticipates funding projects that support the native aquatic species restoration and preservation

through habitat restoration, science, and monitoring, and projects that reduce threats to their survival.

The revenues are deposited in the Federal Aid to Wildlife Restoration fund in the U.S. Treasury.

These funds are annually apportioned according to the formula prescribed by the Act: 50 percent based on land area of the State, Commonwealth, or territory and 50 percent based on paid hunting license holders; no State may receive more than 5 percent or less than one-half of 1 percent of the total apportionment; the Commonwealth of Puerto Rico is apportioned up to one-half of 1 percent; and Guam, U.S. Virgin Islands, American Samoa, and Commonwealth of Northern Mariana Islands each receive up to one-sixth of 1 percent of the total apportionment. Section 4(c) Hunter Education and Safety Program Funds are formula-based apportionment based on State population. No State may receive more than 3 percent or less than 1 percent of the total Hunter Education funds apportioned. Commonwealth of Puerto Rico, Guam, U.S. Virgin Islands, American Samoa, and the Commonwealth of Northern Mariana Islands receive up to one-sixth of 1 percent of the total apportionment. RELATED PROGRAMS:

15.605 Sport Fish Restoration Program; 15.615 Cooperative Endangered Species Conservation Fund; 15.626 Hunter Education and Safety Program

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: The South Carolina Department of Natural Resources (SCDNR) and the National Wild Turkey Federation (NWTf) entered into an agreement for the development of a shooting range complex on approximately 300 acres of NWTf property. Currently NWTf has a small sporting clays course and rifle range on their property. Once completed this facility will provide a safe and functional outdoor facility for recreational shooting, firearm safety and hunter education, with particular emphasis on promoting youth involvement. The total cost is \$2,000,000 (\$1.3M federal (4C funds); \$666,667 non-federal).

The California Department of Fish and Wildlife (CDFW) funded a project with the overall purpose to have approximately 850 California Hunter Education Instructors teach an average of 2,000 Hunter Education (HE) classes for 25,000 and 32,000 students each year. The total cost is \$2.3M (\$1.77M federal; \$590,000 non-federal).

The Idaho Department of Fish and Game (IDFG) wants to develop a better understanding of the population drivers of pronghorn in various habitat types including native shrub-steppe, altered shrub-steppe, and agricultural communities. This information is necessary for conservation and management decisions, including hunting seasons, habitat improvement efforts, and technical assistance to public and private landowners. Fiscal Year 2015: Oregon has a Statewide Habitat Management grant that covers habitat restoration efforts in seven distinct Watershed Districts (Deschutes, John Day, Malheur, Klamath, Rogue, South Willamette, and Umpqua). Goals of the project are to: (1) Maintain, restore, or enhance wildlife habitat on public and private lands to optimize wildlife populations, while paying particular attention to listed species; (2) Evaluate, protect, or enhance existing habitat conditions or restore lost habitats on private and public lands; (3) Assist landowners by providing resources to restore and improve fish and wildlife habitat; and (4) Provide technical advice and assistance to local, State, and Federal agencies regarding land-use activities and proposed developments to promote conservation of fish and wildlife habitats.

The Alaska Department of Fish and Game (ADF&G) will be funding a project titled How do regenerating burns influence moose populations and harvest in Interior Alaska? Moose provide a considerable food resource to Alaskans and moose harvest also contributes to the economy of Alaska. The State of Alaska recognizes the importance of moose to its residents by including the species in laws designed to elevate harvest through intensive management. In accordance with this law, ADF&G developed plans to increase moose densities through

habitat enhancement. However, no comprehensive plan exists for utilizing naturally-occurring burn scars to increase moose density and maximize harvest.

Indiana will develop the Willow Slough Shooting Range, replacing a shooting in Newton County using \$2 million of Section 4 Hunter Education funds. A modern range will enhance the safety of the range while accommodating the demand. Development of this range is expected to increase the number of hunters and recreational shooters using the facilities to 15,000 users per year. Safety, customer service, and accessibility enhancements will all contribute to customer satisfaction. Fiscal Year 2016: The Program has not selected projects for funding. The Program anticipates funding projects to restore, conserve, manage and enhance wild birds and mammals and their habitats and to provide hunter development and safety programs.

CRITERIA FOR SELECTING PROPOSALS:

The State, Commonwealth, or territorial agency having lead responsibility for the management of their wildlife resources must submit the projects. The State, Commonwealth, or territorial agency selects those projects submitted for funding under the program. If approved, projects must meet the basic criteria outlined in the regulations and the Fish and Wildlife Service Manual.

EXAMPLES OF FUNDED PROJECTS:

- Fiscal Year 2014: \$45.4 million in grants awarded to 53 states and territories to support conservation planning and acquisition of vital habitat for threatened and endangered fish, wildlife, and plants. Examples are: 1) Traditional Conservation grant in the amount of \$19,000 to the State of North Dakota for inventory, mapping, and data management activities that support conservation efforts for the Western prairie fringed orchid. 2) HCP Planning Assistance grant to the State of California in the amount of \$717,271 to support the Bakersfield Regional HCP in Kern County. A key element of the new plan would be to establish standardized avoidance and take minimization measures for the San Joaquin kit fox, a federally listed endangered species that utilizes the urban environment within the City of Bakersfield. 3) Recovery Land Acquisition grant in the amount of \$180,000 to the State of Michigan to purchase three parcels of land to protect and assist in the recovery of the endangered Mitchells satyr butterfly and the eastern massasauga rattlesnake, a candidate for ESA listing. 4) HCP Land Acquisition grant in the amount of \$2,000,000 to the State of California to purchase approximately 700 acres of important habitat land for many of the species covered in the East Contra Costa HCP, including federally listed species such as the San Joaquin kit fox, California red-legged frog, and vernal pool tadpole shrimp. The acquisition of these properties added to the

reserve system and provided protection for lands that have rich on-site resources and support a diverse mosaic of habitat types. Fiscal Year 2015: The program has not yet selected projects for funding. However, we expect to award over 200 grants to fund projects similar to those supported in FY14 that benefit threatened and endangered species on non-Federal lands. Fiscal Year 2016: The program has not yet solicited States and Territories for proposals. However, we expect to award over 200 grants to fund projects that benefit threatened and endangered species on non-Federal lands.

CRITERIA FOR SELECTING PROPOSALS:

Proposals for grant funding must be submitted by the State fish and wildlife agency. The State must have an approved cooperative agreement with the Secretary of the Interior which provides for sharing responsibilities for endangered species, prior to receiving Cooperative Endangered Species Conservation Fund (section 6 of the Endangered Species Act) funds. Individual project proposals must compete with other State submissions for funding. For additional information please visit <http://www.fws.gov/endangered/grants/index.html>.

Fiscal Year 2014: Connecticut Coastal \$1,500,000, Inland \$145,643 The Connecticut Department of Energy and Environmental Protection constructed 4 new stationary pumpout systems and 1 upgrade or replacement project and purchase 1 pumpout boat. The State also offered operation and maintenance funds to 41 marinas at an average of \$7,500 per facility and 19 pumpout boats at an average of \$41,000 per boat. They continued their information and education program with a focus on helping boaters understand their sewage system and to encourage them to use pumpout services.

Florida Coastal \$1,410,651, Inland \$770,126 The Florida Department of Environmental Protection constructed 30 coastal and 15 inland pumpout stations to replace or install new facilities for the many boaters in Florida. They expanded their ongoing CVA boater education program.

Indiana Coastal \$104,518, Inland \$257,518 The Indiana Department of Environmental Management constructed and renovated both inland and coastal pumpouts with partners. They covered operation and maintenance funds for partners already involved in providing pumpouts for the boater. In addition, they informed the boaters and public about the Clean Vessel Act grant program through social media and other educational opportunities.

Texas Coastal \$240,000, Inland \$225,000 The Texas Parks and Wildlife Department (TPWD) enhanced the infrastructure of their pumpouts throughout the state by installing seven coastal and nine inland pumpout facilities. TPWD also provided maintenance funds to keep existing pumpouts operational. TPWD continued their boater education program by developing and distributing educational materials related to CVA and conducting workshops throughout Texas.

Washington - Coastal \$1,500,000 The Washington State Parks and Recreation Commission (WSPRC) installed new pumpout facilities and maintained and replaced aging units throughout the State. WSPRC continued a strong educational program, informing the public about the detrimental impacts to the environment of improper sewage disposal throughout the state. Fiscal Year 2015: Program has not yet selected projects for funding. Program anticipates funding projects that construct, renovate, operate, and maintain sewage pumpout stations, waste reception facilities, and pumpout boats for recreational boaters and for educational programs that inform boaters of the importance of proper disposal of their sewage. Fiscal Year 2016: Program has not yet selected projects for funding. Program anticipates funding projects with similar objectives as those in FY15.

CRITERIA FOR SELECTING PROPOSALS:

The criteria for selecting proposals are based upon the extent the project will contribute to public/private partnerships; innovative approaches to increasing availability and use of pumpouts/dump stations; implementation of an education program; contribution toward protecting sensitive areas; and lowering the ratio of vessels with holding tanks and portable toilets to pumpouts and dump stations.

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: The program supported: 1) The prevention of ivory trafficking and transit through Uganda by building the capacity of Uganda Wildlife Authority's (UWA) newly formed Wildlife Crime Unit. Developing scout capacity, expanding their coverage, and increasing the monitoring of ecosystem health in the Mathews and Ndoto mountain ranges in Kenyas arid northern rangelands; and 3) The longest running study of African forest elephants at Dzanga Bai in the Central African Republic. In spite of political turmoil and instability in the country, the area remains an important habitat and gathering site for large numbers of elephants. Funds support ongoing surveillance and monitoring of the site, collection of baseline data, and collaboration with the Dzanga-Sangha project in anti-poaching efforts. Fiscal Year 2015: Program is currently going through the selection process and anticipates funding projects that are effective for the long-term conservation of African elephants, and those that are similar in scope to FY14. EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2013: Examples of FY13 funded projects include: construction of tie-up facilities for non-trailerable, recreational vessels of 26 feet or greater in length; development of amenities for eligible boaters, such as restrooms and other facilities; development of utilities such as shore power and fueling stations for eligible boaters. For example, the Commonwealth of Massachusetts is supporting the City of Lynns Seaport Landing Marina in a project to develop new dockage for eligible vessels. Currently, there are no adequate public facilities within Lynn Harbor for transient boaters to safely dock their boats. The project will install 12 ADA compliant slips and provide a deep-water safe harbor. In Michigan, the Department of Natural Resources, Division of Parks and Recreation is providing a safe and convenient stop for eligible vessels traveling between Detroit/Port Huron and Mackinaw City. The project will add up to 42 slips, utility pedestals, water and related amenities, increasing use of the State Harbor by eligible boaters by an estimated 75%. The Florida Fish and Wildlife Conservation Commission will partner with the City of Riviera Beach, the local redevelopment agency and others to complete Phase II of the City Marina expansion. The project includes dockage for up to 26 eligible vessels, which will be installed to withstand a Category 3 hurricane. Additional features for the benefit of eligible boaters include utilities, a gangway, a fueling platform, fire suppression equipment, and communications infrastructure. EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: Example of US Standard grant project, Glaciated Wetlands and Prairies of ND and MN IV- This is phase four of a project designed to protect wetland and grassland communities using a landscape-level approach to planning. It is also the third project to span the borders of North Dakota and Minnesota in the Prairie Pothole Joint Venture to protect critical habitat for migratory birds. Through this project, 3,456 acres of native grassland and 594 acres of wetland habitat will be secured by perpetual easements resulting in significant benefits for grassland birds. Protection of native prairie surrounding the important prairie wetland habitats in the project area will: 1) provide nesting habitat for waterfowl and other species, and 2) minimize the influx of sediments, herbicides and pesticides into these wetlands. Example of Small grant project, Humboldt Bay Spartina Eradication- Tidal marshes in the Humboldt Bay National Wildlife Refuge are being dominated by invasive Spartina, a noxious weed that degrades the habitat quality and makes it difficult for native salt marsh plants to grow. This project will restore 40 acres of marshes by eradicating the invasive Spartina plants and by continuing to maintain the area for native plant communities. The wetlands surrounding Humboldt Bay, California's second largest natural bay, host more than 260 bird species including 39 shorebird species and 26 raptor species that rely on the bay as they travel the Pacific Flyway. Fiscal Year 2015: Example of US Standard Grant project, Central Flyway Migration Corridor- This effort brings together an extensive list of partners to achieve diverse wetland conservation results at a landscape scale. The grantee will conserve 4,279 acres and enhance 840 acres of the conserved land. The project will permanently protect 382 acres of wetlands, much of which will be added to the Talmo Marsh Wildlife Management Area. Conducting 15 individual projects to restore and enhance wetland habitat conditions, the grantee will also plant new vegetation to support foraging birds during spring migration. Mallard, pintail, and White-Fronted Goose populations greatly depend on these habitats in the Rainwater Basin, as do shorebirds. Fiscal Year 2016: Program has not yet selected projects for funding. Program anticipates funding projects that protect and improve habitat for migratory birds and other wetland-associated species. More examples of NAWCA projects can be found at <http://www.fws.gov/birdhabitat/Grants/NAWCA>.

CRITERIA FOR SELECTING PROPOSALS:

The Council selects proposals based on factors given in Section 5 of the North American Wetlands Conservation Act, results of site visits, available funds and other factors deemed important to meeting Act objectives.

Renewals:

Grantees may renew projects on an annual basis if justifiable and if funds are available.

Formula and Matching Requirements:

Statutory Formula: Yes. States and insular areas are apportioned funds for Hunter Education - Section 4 (c) (traditional funds) and Hunter Education - Section 10 (enhanced funds). Each state receives an annual apportionment for Section 4 (c) and Section 10 funds based their population compared to the total U. S. population with no state receiving more than 3 percent or less than 1 percent. Insular areas receive 1/6 of 1 percent.

Revenues from manufacturers' excise taxes collected on pistols, revolvers, bows, arrows, archer accessories and arms and ammunition are deposited to the Wildlife Restoration Account. 1/2 of the excise taxes collected on pistols, revolvers, bows, arrows and archer accessories are used to fund Section 4 (c). After funding Section 4 (c), \$8 million is deducted from the Wildlife Restoration Account to fund Section 10.

The funds remaining in the Wildlife Restoration Account fund WSFR administration, the Multistate Conservation Grant Program and the Wildlife Restoration Program.

Section 4 (c) funds may be used for hunter education projects or wildlife restoration projects. If all Section 4 (c) funds apportioned in a fiscal year are obligated for hunter education projects, the Section 10 funds apportioned in the same fiscal year may be used for either hunter education or wildlife restoration projects. However, if all Section 4 (c) funds apportioned in the fiscal year are not obligated for hunter education projects, Section 10 funds must be used for hunter education.

Matching Requirements: Yes. Grant funds may be disbursed to States for up to 75 percent of the total cost of a project. Grant funds may be disbursed from 75 to 100 percent of the total project costs to the Commonwealths of Puerto Rico, Northern Mariana Islands and the territories of Guam, the U.S. Virgin Islands, and American Samoa. Each Regional Director decides on the specific Federal share between 75 and 100 percent based on what he or she decides is fair, just, and equitable.

Program funds are generally used annually by States to develop and implement model recruitment and retention programs; offer shooting skills and development; enhance existing shooting and archery range facilities; update safety features of firearm safety and archery ranges; enhance interstate coordination of hunter education, fire arm and archery range programs. Fiscal Year 2015: The program expects to receive approximately 40 applications and to issue about 35 awards. Fiscal Year 2016: The program anticipates receiving approximately 40 applications and issuing about 35 awards.

15.611 Wildlife Restoration

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: The Kentucky Department of Fish and Wildlife Resources (KDFWR) funded the Kentucky Archery in the Schools Program, total cost: \$96,000 (\$72,000 federal; \$24,000 non-federal). During the grant period, 552 Kentucky schools conducted archery programs with 105,398 students participating during regular school hours. The Archery in the Schools Program trained 555 new archery instructors in 64 Basic Archery Instructor training classes, including agency staff at the 3 KDFWR conservation camps. Educational documents were added to the KDFWR website to better inform interested schools about the advantages of the program, as well as a "how to" guide providing information on implementing the program in a school. The Alabama Wildlife and Fresh Water Fisheries Division continued to fund Firearms and Archery Range Development. The total cost is \$180,000 (\$135,000 federal; \$45,000 non-federal). New Shooting Ranges and educational facilities will be developed to ensure the public has a safe, convenient place to shoot and attend hunter education classes.

The Washington Department of Fish and Wildlife provided funds for their Hunter Education Program, which provided funds to law enforcement officers to participate and train students and instructors, purchases needed equipment and supplies, do outreach, develop courses, recruit volunteers and instructors, coordinate hunter education classes, and maintain the online registration system. The total cost was \$1.8M (\$1.4M Federal; \$450,000 non-Federal). Fiscal Year 2015: The Idaho Department of Fish and Game Hunters Education, Bowhunters Education, and Trappers Education programs are designed to educate Idaho hunters and trappers about safe hunting and trapping practices, game management, hunting regulations, and to be responsible, ethical sportsmen and sportswomen. The total cost is \$2.5 M (\$1.8M Federal; \$630,000 non-Federal). This grant utilizes both Section 4 and Section 10 HE funds.

The North Carolina Wildlife Resources Division will partnership with public, private and homeschool organizations to implement the National Archery in Schools Program (NASP) curriculum to teach archery to students in grades four through twelve. All organizations will also work together to train teachers as certified archery instructors and instructor-trainers. Total cost \$108,777 (\$81,583 Federal; \$27,194 non-Federal).

The Georgia Wildlife Resources Division will fund their Range Enhancement and Hunter Development Program. There is a need to introduce youth people to the shooting sports through the School system in an attempt to reverse the decline in hunting license sales. To accomplish this, students and instructors need to be trained properly in the sport of archery to guarantee they participate in the NASP in a safe and ethical manner. Annual events held at various locations statewide will be expanded and additional personnel, equipment and

supplies will be provided to support these events. Total cost \$310,000 (\$230,000 Federal; 80,000 non-Federal). Fiscal Year 2016: The Program has not yet selected projects for funding. The Program anticipates funding Section 10 Enhanced Hunter Educational projects and activities that are eligible each year.

CRITERIA FOR SELECTING PROPOSALS:

The State, Commonwealth, or territory agency having responsibility for the management of their resources must submit the projects. The State, Commonwealth's, or territory's wildlife resources must submit the projects. The State, Commonwealth, or territorial agency selects those projects submitted for funding under the program. If approved, projects must meet the basic criteria outlined in the regulations and the Fish and Wildlife Service Manual.

RELATED PROGRAMS:

15.605 Sport Fish Restoration Program; 15.611 Wildlife Restoration

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: The funds are utilized primarily by state fish and wildlife agencies to fund conservation in the United States. The amount of funds received by a state fish and wildlife agency is dependent, in part, on the number of hunting and fishing licenses sold by a state. The Multistate Conservation Grant Program is a competitive grant program and funded annually with \$6M via the WSFR Program.

The Association of Fish and Wildlife Agencies (AFWA) continued its work with the project, National Fish Habitat Action Plan Implementation and Promoting Strategic Fish Habitat Conservation through Regionally-coordinated Science and Collaboration. This project broadened community support for fish habitat conservation by raising public awareness of the role healthy fish habitats play in the quality of life and economic well-being of local communities; and communicated the conservation outcomes produced collectively by Fishery Habitat Partnerships.

The American Sport Fish Association completed a project, Increase Participation and State Revenues through State-Industry Cooperative Research into Churn Rates and First Time License Buyers. This project collected data to improve current science-based knowledge of angler dropout and license churn rates and to identify the primary factors that encouraged first-time anglers to try the sport.

The National Shooting Sports Foundation (NSSF) continued its project, Increase Hunting License Buyers and Excise Tax Receipts through State-Industry Cooperative Recruitment and Retention Research and Testing. The project reviewed 10 years of license data in 16+ States to assess renewal and churn rates to learn more about active and lapsing hunters; to identify the factors that have influenced first-time license buyers; to apply results to the ongoing NSSF-state outreach efforts; and to scientifically evaluate program effectiveness and to identify improvements. Fiscal Year 2015: The Wildlife Management Institute will begin a project to develop and implement a National Hunting and Shooting Sports Action Plan. This plan will incorporate a suite of solution guides designed to align needed programs, efforts, and funding with specific threats documented by research and experience to be negatively impacting the population of hunters and shooters in the United States.

The Association of Fish and Wildlife Agencies (AFWA) will start a project to look into improving the conservation of fish and wildlife populations and habitats during energy exploration. There is a need to advance the state fish and wildlife agencies leadership role and responsibilities, particularly with respect to coordination with federal agencies, in policy discussions relating to minimizing the impacts of energy development on fish and wildlife resources and their habitats.

The American Sportfishing Association will begin a project, Boosting Fishing Participation by Boat Owners. The objectives are to determine how the boating and sportfishing communities can increase efforts to help recruit and retain anglers and to maximize days of participation and boost license sales. This will be accomplished by mining existing license and boat registration data for correlations between boat ownership and angling, including avidity, churn rates, barriers to participation and other issues identified by states and industry. Fiscal Year 2016: The Program has not yet selected projects for funding. The Program anticipates funding projects that address species or habitat research activities, hunting and fishing recruitment and retention information collection, aquatic or hunter education activities, conservation planning, outreach and coordination.

CRITERIA FOR SELECTING PROPOSALS:

Projects will be reviewed and evaluated for scope, significance, feasibility, and cost effectiveness. In addition, projects must address one or more focus areas as described in the National Conservation Needs established annually by the Association of Fish and Wildlife Agencies (AFWA).

USES AND USE RESTRICTIONS:

Approved activities include those which develop and implement programs or projects for the benefit of wildlife and their habitat, including species that are not hunted or fished. Beneficiary Eligibility:

General Public (While direct participation is limited to fish and wildlife agencies, the public will ultimately benefit from these wildlife conservation measures.).

Credentials/Documentation:

The State, District of Columbia, Commonwealth, or territory must have a Service-approved Comprehensive Wildlife Conservation Strategy (also known as a State Wildlife Action Plan) on file to receive grant funds. The Plan must consider the broad range of the State, the District of Columbia, Commonwealth, or territory agencies' wildlife and associated habitats, with appropriate priority placed on those species of greatest conservation need. 2 CFR 200, Subpart E - Cost Principles applies to this program.

Preapplication Coordination:

An applicant should consult the office or official designated as the single point of contact in his or her State, the District of Columbia, Commonwealth, or territory for more information on this process when applying for assistance if the State has selected the program for review. RELATED PROGRAMS:

15.623 North American Wetlands Conservation Fund

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: San Bernardino Neotropical Migratory Bird Habitat Restoration III - The grantee and partners will work on both sides of the border to restore 2,500 acres of upland grasslands to benefit more than 250 neotropical migratory bird species, including Montezuma Quail and Bells Vireo. Another project activity is restoring a key tributary to the Rio San Bernardino to benefit species of continental concern such as Yellow-billed Western Cuckoo and Cassins Kingbird. The grantee will cultivate a native grass seed bank to secure the sustainability of future grassland restoration, monitor grassland- and riparian-related bird species of regional and continental concern, and conduct outreach with local landowners educational institutions to promote conservation and restoration work on their lands.

U.S.-Mexico Grassland Bird Conservation XII - This project will continue work funded by the NMBCA since 2002 to conserve high-priority declining grassland bird species. In this project phase, the grantee will expand work with landowners in the Valles Centrales of Chihuahua to improve habitat for Spragues Pipit and other grassland birds on at least 25,500 acres; advance research on limiting factors for overwinter survival of grassland birds in the Chihuahuan Desert; and permanently protect 800 acres of short and mixed grass prairie in a priority conservation area in western Nebraska that provides breeding and stopover habitat for these same species. The grantee expects to double the wintering population of Spragues Pipts and other high priority species including Bairds Sparrow and Chestnut-collared Longspur on project sites in Chihuahua over the next 5 years.

Reforestation of Critical Wintering Habitat for Neotropical Migrants V - The American Bird Conservancy and its in-country partners will: plant 140,000 native trees and coffee bushes; enhance or manage at least 695 acres; and contribute to the ongoing protection of 16,557 acres as significant wintering habitat for migratory birds in Ecuador and Peru. Partners will also measure migrant warbler density and habitat use to guide adaptive management for future restoration work. These efforts will focus on the Cerulean Warbler and will benefit 20 additional neotropical migratory bird species, as well as many resident bird species. Activities will also engage coffee growers and cattle ranchers, through technical workshops and outreach, to improve bird habitat on their lands and to encourage people living on public lands within the Alto Mayo Protection Forest to sign conservation agreements empowering local people to use agricultural practices that benefit migratory birds. Fiscal Year 2015: Projects not yet selected. Program expects to fund 25-35 awards to support public-private partnerships carrying out projects in the United States, Canada, Latin America, and the Caribbean that promote the long-term conservation of Neotropical migratory birds and their habitats through: 1) Protection and management of neotropical migratory bird populations; 2) Maintenance, management, protection, and restoration of neotropical migratory bird habitat; 3) Research and monitoring; 4) Law enforcement; and 5) Community outreach and education. Fiscal Year 2016: Projects not yet selected. Award Procedure:

For the Monitoring Program, an inter-agency technical review committee evaluates proposals, and, for those selected for further consideration, subsequently the full investigation plans. The committee develops a draft monitoring program from the highest priority projects, based on their technical review and available funds. The draft monitoring plan is reviewed by ten regional advisory councils and the public. An inter-agency staff committee reviews all recommendations, and provides recommendations. The Federal Subsistence Board selects projects for the Monitoring Plan taking into account all recommendations and comments. Funding of the Monitoring Plan is

administered by the Office of Subsistence Management (OSM).

For the Partners Program, an internal review is conducted to evaluate proposals and make recommendations for funding. The evaluations are based on the criteria outlined in the request for federal assistance. The proposals are ranked and the OSM Assistant Regional Director selects proposals that best support the program within available funding. Once a Monitoring Program project or Partners Program position is selected for funding, a funding instrument, i.e., notice of award, between Fish and Wildlife Service and the recipient is drafted by the OSM. The award is processed by OSM through the contracting office and sent to the recipient for signature. The award is considered executed when signed copies of the agreement are received from the recipient and the contracting office has obligated funds to the agreement. The awards are administered by OSM.

Deadlines:

Apr 04, 2014 Contact the regional office for application deadlines. Currently, the next Notice of Funding Availability for the Fisheries Resource Monitoring Program for submission of Investigation Plans should be posted to grants.gov near the end of 2014. RELATED PROGRAMS:

Not Applicable.

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: Project Number: 14-208. Koyukuk River summer chum salmon (*Oncorhynchus keta*) stocks makeup one of the largest contributors to the Yukon River summer chum population, yet accurate information on their overall abundance and distribution is severely lacking.

The proposed project will use radio telemetry to estimate the proportional distribution of chum salmon throughout the tributaries of the Koyukuk River (middle Yukon River Drainage). Fiscal Year 2015: FY15: Project number: 14-252. Whitefish resources are a critical subsistence resource and an emerging commercial one; however, the management of these species is not well informed regarding stock status, harvest levels, or critical life history variables

given the paucity of research on these species.

Objectives: Document local knowledge related to traditional and contemporary patterns of subsistence whitefish harvests in Alakanuk, Nunam Iqua, Saint Marys, and Kotlik, including:

- a. species utilized and local names used with introductory nomenclature analysis
- b. fish ecology, including information about habitat, spawning and seasonal movements
- c. contemporary and traditional methods and timing of harvest
- d. contemporary and traditional methods of preparation and preservation
- e. spatial mapping of harvest areas and other significant habitats by species and season
- f. traditional management practices and the effects on fish populations
- g. fish-related place-names
- e. relative abundance and population trends.

1. Estimate subsistence harvest levels and percentages of households using, harvesting, giving away, and receiving resident freshwater fish species (nonsalmon) for the calendar years 2014 and 2015 by species and season for the communities of Alakanuk, Kotlik, Nunam Iqua, Saint Marys, Pilot Station, and Marshall in the lower Yukon River. Harvest data set will also include basic demographic information, households assessment of harvests and use compared to recent years, and questions tracking the harvest, processing, and sharing networks present within and between communities.

2. Explore Indexing method of estimating annual community subsistence harvests of whitefish species in the lower Yukon River area. Appropriate statistical tests will be applied to collected variables to identify significant factors in whitefish harvests. Further exploration will occur using multiple regression to identify more complex relationships in collected data, and inform the development of adjustment factors to the mean of the index community. Fiscal Year 2016: Continuing project 14-103 Fisheries managers have long recognized the importance of Dolly Varden to subsistence users on the North Slope. The number of Dolly Varden harvested for subsistence purposes is largely undocumented in northern Alaska, but it is known that residents of villages in this region rely heavily upon this fish species.

Objectives: The objectives of this proposed project are:

1. Describe baseline ecological information about Dolly Varden tagged in the lagoons near Kaktovik, Alaska, including:
 - a. Timing of outmigration to the Beaufort Sea
 - b. Summer dispersal
 - c. Temporal and spatial distribution
 - d. Depth and temperature occupancy
2. Describe temporal and spatial distribution in relation to areas where human activities such as shipping and hydrocarbon extraction are taking place to provide information to the public, biological resource managers and marine gas and oil resource managers to better understand potential interactions among Dolly Varden and human activities in the Beaufort Sea.

CRITERIA FOR SELECTING PROPOSALS:

For the Monitoring Program, each proposal is evaluated using the following five criteria: (1) Strategic Priorities: Studies must be responsive to identified issues and information needs. All projects must have a direct association to a Federal subsistence fishery, and either the subsistence fishery or fish stocks in question must occur in waters within or adjacent to Federal public lands; (2) Technical and Scientific Merit: Technical quality of the study design must meet accepted standards for information and collection, compilation, analysis, and reporting. Studies must have clear objectives, appropriate sampling design, correct analytical procedures, and specified progress and final reports; (3) Investigators Ability and Resources: Investigators and their organizations should have demonstrated technical and administrative expertise to complete prior studies, or have co-investigators or appropriate partnerships with other organizations to meet all requirements of the study; (4) Partnership-Capacity Building: Studies must include appropriate partners and contribute to building capacities of rural organizations, local communities, and residents to participate in fisheries resource management. Investigators and their organizations should be able to demonstrate the ability to maintain effective local relationships and a

commitment to capacity building and; cost benefits. (5) Applicants cost/price proposal will be evaluated for reasonableness. For a price to be reasonable, it must represent a price to the government that a prudent person would pay when consideration is given to prices in the market. Normally, price reasonableness is established through adequate price completion, but may also be determined through cost and price analysis techniques.

For the Partners Program, each proposal is evaluated using the following equally weighted criteria: (1) Each project must have direct linkage to Monitoring Program projects; (2) Ability to successfully implement program identified under section IV, ii, Content and Form of Application, Describe the Program; (3) Strategic priority and past performance of the Monitoring Program projects identified in the proposal; (4) Letters of support from tribal and rural organizations, government agencies, project investigators, and schools/universities; (5) Annual and total cost of the proposal, including use of in-kind or matching contributions that either decrease cost or expand support for implementing the Partners Program; (6) Past performance on implementing Monitoring Program projects; (7) Past performance on current or past agreements with the Office of Subsistence Management; (7) Previous experience in mentoring, training, and supervising personnel; and (8) Past and current accounting practices to ensure deliverables and accountability.

Each of these items carries a "Go/No-Go" impact: direct linkage of a Monitoring Program project, enrollment in CCR; affirming in writing in your application that you have enrolled in CCR; providing your DUNS Number; submission of completed SF-424, SF-424A, and SF-424B package; and submission of approved Indirect Cost Negotiation Agreement if requesting reimbursement for indirect costs.

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: Nez Perce Tribe (\$200,000) Restoration of Bighorn Sheep Populations and Habitats along the Salmon River, Idaho Final Phase: Funding is being used to complete the Salmon River Bighorn Sheep Study and collect data on study objectives for the final two field seasons. Objectives include: (1) gaining a better understanding of movements, distribution, and status of bighorn sheep along the remote South Fork Salmon portion of the project area, and (2) obtain more robust population trend data across the project area. Study data, particularly establishing better trend data for tracking population status including population numbers, ewe production, and lamb survival will be instrumental in addressing ongoing legal challenges of Federal decisions and Federal land use planning NEPA reviews.

Passamaquoddy Tribe - Pleasant Point Reservation (\$198,885) Alewife Migration Behavior and Food Web Interactions in the St. Croix River and Estuary: The project represents the first steps in raising awareness and

improving environmental conditions for the betterment of future generations. The Project provides an opportunity for the Pleasant Point Passamaquoddy to build our capacity to safeguard the resources we have left by hiring a fisheries ecologist. That person will pursue monitoring studies important to the tribe as well as represent the tribes interest in meetings that will affect the fate of natural ecosystems in our Ancestral Homeland. Restoring alewife to the St. Croix River is a top priority for us and we believe success will be readily achievable with qualified, professional personnel representing the tribes interests at the meeting table and in the field.

15.647 MIGRATORY BIRD CONSERVATION

FEDERAL AGENCY:

Fish and Wildlife Service, Department of the Interior

AUTHORIZATION:

Fish and Wildlife Act of 1956, as amended, 16 U.S.C. 742a-754; Fish and Wildlife Coordination Act of 1958, 16 U.S.C. 661-667(e); Fish and Wildlife Conservation Act, 16 U.S.C. 2901-2911; and Migratory Bird Treaty Act, 16 U.S.C. 709a.

OBJECTIVES:

To maintain and enhance populations and habitats of migratory bird species found in the Upper Midwest (IL, IN, IA, MI, MN, MO, OH, WI).

TYPES OF ASSISTANCE:

Project Grants (Discretionary)

USES AND USE RESTRICTIONS:

Grants may be used for the conservation of any bird species protected by the Migratory Bird Treaty Act and occurring in U.S. Fish and Wildlife Service (USFWS) Region 3 (Upper Midwest, including IL, IN, IA, MI, MN, MO, OH, and WI). Special emphasis will be placed on Birds of Concern in the Midwest (see <http://www.fws.gov/midwest/midwestbird/concern.html>) as these species are experiencing known or suspected population declines, are recreationally important, or are causing biological or social conflicts. Implementing national, regional, and flyway bird conservation plans, including the Partners in Flight North American Landbird Conservation Plan (<http://www.partnersinflight.org>), U.S. Shorebird Conservation Plan (<http://shorebirdplan.fws.gov>), North American Waterbird Conservation Plan (<http://www.waterbirdconservation.org>), North American Waterfowl Management Plan (<http://www.fws.gov/birdhabitat/NAWMP/index.shtml>), and Mississippi Flyway bird management plans, is the USFWS's highest priority, and proposals related to the priorities identified in these plans and Bird Conservation Region and state-level bird conservation planning efforts will receive high funding consideration. The following activities are also of high interest to the USFWS: a) Population surveys, monitoring, and assessments to determine the status, trends, distribution, demography, and responses to management of bird species and groups of concern. Emphasis will be placed on landscape-level applications of standardized inventory and monitoring protocols as identified through the Midwest Coordinated Bird Monitoring Partnership (<http://midwestbirdmonitoring.ning.com>). Local-scale bird monitoring (e.g., local land management units) will generally not be a focus of this grant program, nor will support for long-term operational bird monitoring efforts. Rather, the program seeks to address coordination of monitoring efforts and development and evaluation of new survey and monitoring techniques (both field and analytical); b) Conservation of focal species for which conservation plans and/or working groups have been developed and research, monitoring, and other priorities have been identified. Examples of focal species include: Golden-winged Warbler, Cerulean Warbler, Henslows Sparrow, Bobolink, other Midwestern grassland birds, American Woodcock, Wilsons Phalarope, Upland Sandpiper, Marbled Godwit, Common Tern, Black Tern, King Rail, and Lesser Scaup (for further information on focal species, contact Steve Lewis, USFWS, steve_j_lewis@fws.gov); and c) Strategic Conservation, wherein the USFWS and partners integrate biological planning, landscape

design, conservation delivery, and monitoring and evaluation in a way that generates the adaptive feedback loops that enable sound decisions and constantly improve our efficiency and effectiveness in saving birds (<http://www.fws.gov/midwest/science/SHC/FAQ.htm>). Strategic conservation involves applied research, including studies of bird habitat requirements, threats, limiting factors, and population responses to habitat conservation activities; and use of Geographic Information Systems, modeling, and similar tools to identify bird habitat focus areas and further bird conservation planning efforts. 25%.

PROGRAM ACCOMPLISHMENTS:

Fiscal Year 2014: 156 miles of streamside habitat were assessed. In addition, approximately 135,000 cubic yards of material were excavated from perched floodplain on the Merced River. This material was graded and screened, and 50,000 cubic yards of appropriately sized gravel and cobble were placed in the river to create nearly 1.25 miles of spawning habitat and create a juvenile rearing side channel. Fiscal Year 2015: The Anadromous Fish Restoration Program (AFRP) anticipates implementing fish passage projects on Deer Creek, Cottonwood Creek, and Mill Creek in the Upper Sacramento River Basin; funding channel and floodplain restoration projects in the Yuba River, Stanislaus River, and American River; restoring 6 acres of floodplain and place approximately 28,000 cubic yards of spawning gravel in the Merced River; and

receiving 40 applications and issuing 15 awards. Fiscal Year 2016: The AFRP anticipates implementing fish passage projects on Deer Creek, Cottonwood Creek, Mill Creek, and Cow Creek in the Upper Sacramento River Basin; funding channel and floodplain restoration projects in the Yuba, Stanislaus, Sacramento, American, Stanislaus and Merced rivers; and receiving 30 applications and issuing 12 or more awards.

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: 1) Working with the National Fish Passage Program, the local landowner and other interested parties, the AFRP worked to remove a barrier to fish passage on the Calaveras River and to replace the barrier with a fish friendly box culvert. The newly designed and constructed river crossing allows the property owner better year-round access to his property while removing a barrier to fish passage. 2) The AFRP funded the removal of Hammer Dam on South Fork Cottonwood Creek. The dam had provided power for 70 years to the landowner. The U.S. Fish and Wildlife Service was able to provide designs and equipment for a solar power system to replace the electricity generated by the dam and a fish screen to provide water. Once the dam was removed 5 miles of stream habitat was opened to the native anadromous fish. 3) AFRP funded the continuation of rotary screw trap monitoring on the Merced River. This monitoring provides information on the timing and abundance of juvenile chinook salmon leaving the Merced River. Fiscal Year 2015: The AFRP: 1) Anticipates funding phase 2 of the Lower Deer Creek Falls Fish Passage project. This phase of the project includes completing all of the environmental documentation required prior to construction activities planned in future years; 2) Plans to fund the Yuba River Narrows Restoration which will remove shotrock (material left over from the Englebright Dam Construction) from key sections of the canyon immediately downstream from the dam. Removal of this material is expected to increase the quality of habitat for anadromous salmonids; 3) Funds a project to determine the age, growth, and fin ray microchemistry of Sturgeon in the Sacramento and San Joaquin River Delta. This project will evaluate the effects of trace elements and organic contaminants, especially selenium and PCBs on the health of adult white and green Sturgeon, including the viability of their gametes and development of their offspring. Fiscal Year 2016: AFRP has not yet selected projects for funding. AFRP anticipates funding projects that: (a) Protect, restore, and enhance fish, wildlife, and associated habitats in the Central Valley and Trinity River basins of California; (b) Address impacts of the Central Valley Project on fish, wildlife and associated habitats; (c) Improve the operational flexibility of the Central Valley Project; (d) Increase water-related benefits provided by the Central Valley Project to the State of California through expanded use of voluntary water transfers and improved water conservation; (e) Contribute to California's interim and long-term efforts to protect the San Francisco Bay/Sacramento-San Joaquin Delta Estuary; and (f) Achieve a reasonable balance among competing demands for use of Central Valley Project water, including the requirements of fish and wildlife, agricultural, and municipal, industrial and power contractors.

CRITERIA FOR SELECTING PROPOSALS:

Proposals will be reviewed by a team of Federal staff based on the following criteria: Addresses high priority need as described in the Request for Proposal (RFP) "Purposes and Funding Priorities"; Clearly stated goals, objectives, hypotheses, and relevance of idea; Approach is valid and technically sound;

Primary Investigators and/or subcontractors record of performance and expertise; Budget is reasonable and provides good value for funds requested; and Cost sharing or in-kind contributions.

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: Adverse impacts to trust species and their habitats from historical industrial releases of hazardous substances in the Ashtabula River, Ashtabula, OH - Several restoration projects were completed. Restoration activities on various newly purchased properties included invasive plant removal, planting of native trees and shrubs within the wetland and riparian areas, improvement of a nature trail, installation of a primitive canoe launch, and construction of a boardwalk and observation deck over a wetland and pool area. Another restoration project involved a 6.4 acre peninsula; activities included the creation of a hydrologic connection between the peninsula with the main channel of the Ashtabula River, establishment of emergent wetlands along the newly constructed channel, and replacement of invasive plant species with a diverse array of native plants and trees. In addition, removal of invasive species and subsequent planting of native plants was completed on 43 acres of Lake Erie shoreline near Walnut Beach, Ashtabula, Ohio, in collaboration with the Army Corps of Engineers.

Adverse impacts to trust species and their habitats from a pipeline oil spill in Santa Barbara County, CA - Several restoration projects were completed. A restoration project removed invasive plant species to restore natural sandy beach and dune habitat. Educational projects designed to reduce human impacts to sensitive, rocky intertidal habitats were also conducted, including installation of educational signs and providing classroom trainings and field trips to over 1,000 students that engaged the students in hands-on monitoring of rocky intertidal habitats. Also, enhancements to a boardwalk and viewing platform (constructed as part of a previous years restoration project related to the case) were finalized, including installation of a free wildlife viewing scope and educational signage.

Adverse impacts to trust species and their habitats from historical industrial releases of PCBs into the Housatonic River, in both Connecticut and Massachusetts - Several restoration projects were completed. One project involved the installation (after several prior years of design, permitting and construction) of a new fishway on Furnace Brook in Cornwall, Connecticut to restore access to upstream spawning habitat for wild and stocked trout. Another restoration project involved the construction of a nature-like bypass channel around the Tingue Dam on the Naugatuck River in Seymour, Connecticut. Additionally, floodplain habitat restoration at Bartholomews Cobble Conservation Area in Massachusetts has continued through management of invasive species and planting native floodplain trees in former agricultural lands. Fiscal Year 2015: We have not selected projects for funding. We anticipate funding projects to restore trust species and their habitats to compensate for injuries from contaminant releases and oil spills. Fiscal Year 2016: We have not selected projects for funding. We anticipate funding projects to restore trust species and their habitats to compensate for injuries from contaminant releases and oil spills.

OBJECTIVES:

The U.S. Fish and Wildlife Service (USFWS) uses a science-based, adaptive framework for setting and achieving broad-scale conservation objectives that strategically address the problems fish and wildlife will face in the future. This framework, called Strategic Habitat Conservation, is based on the principles of adaptive management and uses population and habitat data, ecological models, and focused monitoring and assessment efforts to develop and implement strategies that result in measurable fish and wildlife population outcomes. This process uses the best available scientific information to predict how fish and wildlife populations will respond to changes in the environment, thus enabling the USFWS to focus habitat conservation and other management activities

where they will be most effective. In addition, the USFWS needs focused, applied science directed at high impact questions surrounding threats to fish and wildlife resources for which management and/or mitigation is required to maintain species at healthy, sustainable, desired levels. USFWS must base its decisions on the best science available, in order to defend its regulatory decisions, biological opinions and species conservation recommendations to land managers.

Detailed instructions for submitting both an initial proposal and a detailed proposal will be posted on Grants.gov. The Project Officer for the grant announces the call for initial proposals via newspapers, email, and Grants.gov. Links to the initial call for proposals are posted on the Fairbanks Fish and Wildlife Field Office website and are distributed to state, federal, NGOs, and universities.

Award Procedure:

The initial project proposals will be evaluated by an interagency review committee which will provide recommendations to the U.S. Section of the Yukon River Panel (Panel) for final approval. Authors of selected initial proposals will be notified by the Service to submit detailed proposals for final review and selection. Service staff will notify applicants of review results by either sending them an approval letter stating their selection and a project agreement to sign and return to the Service or by sending written notification to the applicant that the application was not selected. Per <http://www.doi.gov/pam/TermsandConditions.html>, acceptance of a Federal Financial award from the Department of the Interior carries with it the responsibility to be aware of and comply with the terms and conditions of the award. Acceptance is defined as starting work, drawing down or otherwise requesting funds, or accepting the award via electronic means. Awards are based on the application submitted to, and as approved by the Department of the Interior and are subject to the terms and conditions incorporated in to the Award either directly or by reference to the following: Program legislation/regulation, assurances, special conditions, the Code of Federal Regulations, and other regulatory requirements, as applicable.

RELATED PROGRAMS:

15.608 Fish and Wildlife Management Assistance; 15.664 Fish and Wildlife Coordination and Assistance Programs

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: Program funded projects that: 1) helped build and maintain public support for management of the Yukon River salmon through outreach events, weekly teleconferences, and public meetings; 2) dealt with monitoring salmon returns in rivers; and 3) assessed the effectiveness of various gill net sizes and depths at catching chum and Chinook salmon. Fiscal Year 2015: Program anticipates funding projects that increase/improve understanding of the biology and management of Yukon River salmon species in the Alaska portion of the basin. Fiscal Year 2016: Program has yet to identify specific project needs, but anticipates directing significant funding towards projects that increase/improve the understanding of in-season subsistence harvest of Yukon river salmon species.

CRITERIA FOR SELECTING PROPOSALS:

Review criteria are based on the applications requirements as posted in the call for proposals. Selections for funding are principally based on the merit of the project and how well the project addresses one or more of the priorities and factors identified in the call for proposals. Proponents success in previous projects and their ability to successfully and efficiently execute the new project is also taken into consideration. Finally, timeliness in the submission process is also used as a criterion for approval.

15.672 WILDLIFE WITHOUT BORDERS AMPHIBIANS IN DECLINE FEDERAL AGENCY:

Fish and Wildlife Service, Department of the Interior

AUTHORIZATION:

Endangered Species Act of 1973, as amended (16 U.S.C. 1531-43).

OBJECTIVES:

The goal of this grants program is to provide funding for specific conservation actions that have a high likelihood of creating durable benefits to amphibian species facing immediate threat of extinction, such as: Protection of at-risk populations; Veterinary/wildlife health interventions; Activities related to execution of species survival plans; Strengthening local capacity to conserve the target species; Actions addressing unsustainable exploitation; Efforts to mitigate or stop wildlife-human conflict; and Rehabilitation and rescue. Proposed project work should occur within the species range, or, if work is to be conducted outside of the range, the proposal should show a clear relevance to its conservation.

TYPES OF ASSISTANCE:

Project Grants (Discretionary)

USES AND USE RESTRICTIONS:

The program will fund projects that conserve the worlds rapidly declining amphibian species. Species eligible for funding are those frogs, toads, salamanders, newts, and caecilians that face a very high risk of extinction in the immediate future. Species should meet the criteria to be listed as Critically Endangered or Endangered on the International Union for the Conservation of Nature (IUCN) Red List. Species listed as Data Deficient on the IUCN Red List are also eligible if the applicant can provide information that suggests a similar urgency for conservation action. Species listed as Extinct in Wild are eligible if the applicant is proposing a reintroduction attempt. The following species are NOT eligible for funding: Species with natural habitat range located primarily within the United States, territories of the United States, Canada, and the high income economies of Europe; and Non-amphibian species.

Applied research projects should address specific management needs and actions. Funds provided under this program will not be used for: the purchase of firearms or ammunitions; buying of intelligence information or paying

informants; gathering information by persons who conceal their true identity; law enforcement operations that prompt suspects to carry out illegal activities so they may be arrested (entrapment); or any activity that would circumvent sanctions, laws or regulations of either the U.S. or the country in which the activity would occur. Funds may not be used to provide material support or resources to individuals, entities, or organizations of countries that have been identified by the U.S. Department of State as state sponsors of terrorism. This program is administered in compliance with the Federal Grants and Cooperative Agreements Act of 1977, as amended. These funds may not be used towards training U.S. Federal Government personnel. Project work should occur in countries outside of the United States that have within their boundaries amphibian habitats and be conducted by any person or group with the demonstrated expertise required for the successful implementation of the proposed project. 100%.

Applicant Eligibility:

Applications may be submitted by any non-domestic (outside of the United States) government agency responsible for amphibian conservation and any other U.S.-based or non-domestic public or private organization or institution or individual with demonstrated experience in amphibian conservation.

Beneficiary Eligibility:

Non-domestic (outside of the United States) government agencies responsible for amphibian conservation and any other U.S.-based or non-domestic public or private non-governmental organization or institution or individual with demonstrated experience in amphibian conservation.

Credentials/Documentation:

No Credentials or documentation are required. This program is excluded from coverage under 2 CFR 200, Subpart E - Cost Principles.

Preapplication Coordination:

Preapplication coordination is not applicable. Environmental impact information is not required for this program. This program is excluded from coverage under E.O. 12372.

Application Procedures:

2 CFR 200, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards applies to this program. The program announcement and application instructions for this program can be found at the Grants.gov website: <http://www.grants.gov>. Complete application information can also be found at <http://www.fws.gov/international/grants-and-reporting/how-to-apply.html>, or, if unable to access the website, by requesting a paper copy from the Division of International Conservation, U.S. Fish and Wildlife Service, 4401 N. Fairfax Drive, Room 100, Arlington, VA 22203, Telephone: (703) 358-1754. A proposal will not be considered complete if required elements are not submitted as instructed. U.S. applicants must submit (among other elements) a complete, signed Standard Form 424 Application for Federal Assistance.

Award Procedure:

Projects are reviewed and competitively selected for funding based on established criteria. Review criteria can be found in the application information at <http://www.fws.gov/international/grants-and-reporting/how-to-apply.html>. Once a proposal has been selected for funding, an FWS approving official executes an Assistance Award between the Fish and Wildlife Service and the Recipient. Fully executed Awards are sent to the Recipient either electronically or through the mail. The Division of International Conservation then administers all other aspects of the Assistance Award.

Deadlines:

May 01, 2015 to May 31, 2015 Between April and May 2015.

Range of Approval/Disapproval Time:

Decisions on funding of project proposals will be made within 180 days after the receipt of the project proposal.

Appeals:

Not Applicable.

Renewals:

Recipients may request funding for a subsequent year/cycle of a currently funded project. However, these requests are subject to the same submission, review, and approval requirements as all new applications. This program will

fund any approved renewal application as new award, not as an amendment to an existing award. Recipients may request approval for budget and project plan revisions of funded projects, including period of performance and reporting due date extensions, in accordance with 43 CFR Part 12.

Formula and Matching Requirements:

This program has no statutory formula.

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: Program supported: 1) A project that will re-establish healthy wild populations of Panamanian golden frogs; 2) A project that will highly improve protection of Somuncura frog by alleviating main threats; and 3) A project that will maintain a viable wild population of the critically endangered Togo slippery frog in Ghana. Fiscal Year 2015: Program has not yet selected projects for funding. Program anticipates funding projects that are similar in scope to those awarded in FY 2014. Fiscal Year 2016: Program anticipates funding projects that are similar in scope to FY 2014.

CRITERIA FOR SELECTING PROPOSALS:

To be considered for funding, proposals must specify a conservation action for an eligible species. The Division of International Conservation ranks proposals by scoring how well each addresses the program priority areas and the requested proposal elements. High priority, well-justified and feasible projects that address all of the requested proposal elements will receive higher scores. These scores are not the sole determining factor for final funding decisions.

Other review criteria include considering the degree to which a project:

Demonstrates the high degree of threat or extinction risk that the target species experiences;

Addresses a conservation need of a species that is exceptional ecologically, evolutionarily, or in conservation (Note that it is the responsibility of the applicant to articulate what quality makes the species exceptional, but examples would include a species that strongly influences the ecological community in which it occurs, a species that is genetically distinct with few close relatives, a species that exhibits a distinctly unusual behavior, or a species whose conservation would catalyze the conservation of multiple species);

Occurs in a region or conserves a taxon poorly represented in the Amphibians in Decline portfolio;

Makes a significant and durable contribution to the survival of the species, or

to the integrity of its habitat or an area with significant conservation value for the species;

Addresses a conservation need identified by a specialist group or by a regional, national or global strategy;

Applies the best scientific and technical information and methods available in support of project activities;

Includes the participation of local partners in project activities, including meaningful involvement of government, community or civil society stakeholders;

Is feasible and likely to be successfully implemented as stated;

Advances the practice of conservation by being designed and implemented in a way that the successes and failures of activities can be credibly assessed and shared;

Emphasizes conservation action rather than data collection; and

Implements activities or provides benefits that have the potential to be sustaining beyond the period of performance of the grant, including training that develops local capacity to implement or manage conservation projects.

The above considerations are not listed in any order of importance. All considerations listed do not necessarily apply to every proposal. Following review, applicants may be asked to revise the project scope and/or budget before a final funding decision can be made.

15.673 WILDLIFE WITHOUT BORDERS CRITICALLY ENDANGERED ANIMAL CONSERVATION FUND

FEDERAL AGENCY:

Fish and Wildlife Service, Department of the Interior

AUTHORIZATION:

Endangered Species Act of 1973, as amended (16 U.S.C. 1531-43).

OBJECTIVES:

The goal of this grants program is to reduce threats to highly endangered wildlife in their natural habitat. Proposals should identify specific conservation actions that have a high likelihood of creating durable benefits, such as: Protection of at-risk populations; Veterinary/wildlife health interventions; Activities related to execution of species survival plans; Strengthening local capacity to conserve the target species; Actions addressing unsustainable exploitation; Efforts to mitigate or stop wildlife-human conflict; and Rehabilitation and rescue.

Project activities that emphasize data collection and status assessment should describe a direct link to management action, and explain how lack of information has been a key limiting factor for management action in the past. Proposals that do not identify how actions will reduce threats, or do not demonstrate a strong link between data collection and management action, have a lower likelihood of being selected. Proposed project work should occur within the species range, or, if work is to be conducted outside of the range, the proposal should show a clear relevance to its conservation.

TYPES OF ASSISTANCE:

Fiscal Year 2014: Program supported: 1) A project that will stabilize populations of Endangered Golden-crowned flying foxes in the Philippines to avoid risk of extinction by protecting roost sites; 2) A project that will attempt to double the wild population of Siamese crocodiles by 2017 and to leverage the species as a flagship for conserving threatened rivers and wetlands in Cambodia; and 3) A project that will address the main threats to the conservation of the Indonesia Slow Loris, illegal trade and habitat loss, by improving law enforcement capacity and awareness, and increasing public awareness of the primate to reduce demand for their trade. Fiscal Year 2015: Program has not yet selected projects for funding. Program anticipates funding projects that are similar in scope to those awarded in FY14. These considerations are not listed in order of importance. All considerations listed do not necessarily apply to every proposal. The Division of International Conservation occasionally receives and funds proposals outside of the announced submission deadlines that are of such a critical nature (examples include projects resulting from a natural disaster, disease outbreak, other imminent threats or population crash, among others) that they warrant immediate consideration.

PROGRAM ACCOMPLISHMENTS:

Fiscal Year 2014: 18 projects were completed for projects that were awarded in FY11 and FY12. Training and outreach continued to be valued outcomes of the program. The Sonoma Ecology Center's metadata training reached a wide range organizations and individuals in California. One project investigated the transition from FGDC Content Standard for Digital Geospatial Metadata (CSDGM) to internationally accepted geospatial metadata standards (ISO 19115). Other FGDC-endorsed standards promoted this year were the National Vegetation Classification (NVC) Standard and the Wetland Mapping Standard. The standard for Cadastral Data Content benefited from the development of a draft implementation model in Extensible Markup Language/Geographic Markup Language (XML/GML) for parcel data. Oregon held several successful outreach efforts to introduce the benefits and capabilities of sharing data catalogs using open standards and developed training materials available at www.coastalmarinedata.net/resources.

As part of the Fifty States Initiative, three projects were completed in Maine, Maryland, and Nevada to advance each States geospatial business plans. Maine's orthoimagery business plan implementation resulted in greater community involvement, especially in small communities and rural counties. Maryland's plan focused on activities necessary to support the creation, expansion, and widespread distribution of statewide parcel data. Nevada completed business plans for statewide parcel data and enhanced elevation data, which both point out the need for a single organization to set priorities for geospatial data at a statewide level and coordinate strategies for data acquisition and dissemination.

Iowa, Louisiana, Maryland, and Ohio increased participation in the National States Geographic Information Councils (NSGIC) GIS Inventory System (gisinventory.net), adding metadata containing links to standards-compliant data or data services that support Federal Geoplatform.gov activities. A project completed by the California Emergency Management Agency promoted the adoption of Unified Incident Command Decision Support (UICDS) middleware to achieve geospatial data sharing and interoperability in the emergency management environment.

And finally three Geospatial Platform Cloud Service Testbed projects were completed and provided valuable information about the deployment costs and performance characteristics of secure geospatial cloud services at the State and Tribal levels.

EXAMPLES OF FUNDED PROJECTS:

Fiscal Year 2014: A state will inventory and scan 800 mineral survey inventory documents dating from 1930s. These documents are public record and currently available on a limited basis due to their fragility. The collection will be converted to digital format to ensure preservation and made available to the public via the Internet and added to an existing online mineral commodity database. Well-described metadata will be generated for the documents. These inventory reports have been an important source of unpublished information for state agencies and consulting geologists, as well as aiding in ongoing geologic mapping projects. The availability of these digital records will be a highly valuable asset for those researching industrial minerals or metals in the state. The documents will provide a record that can be compared with modern data to track landscape change over time and will provide a baseline for assessing industrial mineral and metal availability in the state.

Another state will convert 2,500 paper geophysical log documents to image files and digitize select logs to preserve and prevent loss of irreplaceable information and provide more efficient, cost effective access by professional and public entities. For these logs, locations and metadata will be improved and linked to other existing information for ease of use and re-distribution to the customers. Interest has increased in resistivity, gamma, and neutron logs, especially in geological units of early Eocene age or older, for natural gas exploration, carbon capture and storage, wastewater injection, and aquifer system studies. Information obtained from digital logs will aid sinkhole studies in various locations throughout the state as well as resource evaluation and determination of aquifer extents for potable and non-potable water sources. Preservation of geophysical log information will aid mineral, water, oil and gas resources determination needed for policy and land use considerations.

Another state will scan and digitally convert approximately 7,100 9x9 black and white aerial photographs from the 1960s and 1970s in the Chesapeake Bay region. These photographs will be converted to JPGs and TIFFs at a resolution of 1200 dpi. Well-described metadata will be written describing the aerial photographs. These photographs include high altitude aerial photos, color aerial photos, additional county aerial photos, and regional infrared aerial photos. The aerial photos will be used to develop a baseline against which to measure the declining health of the Chesapeake Bay over the past several decades, which has been a cause of concern and intensive study among a myriad of federal, state, and local government agencies. The photos have been used to calculate shoreline rates of change, which coastal planners use to determine shoreline stabilization strategies appropriate for reaches of shoreline subject to different wave energies (and erosion rates). Historic aerial photos are also useful to archeologists, providing important information about historic development - not only buildings, but other, smaller features that are not often mapped, including small roads and fence lines. These features can be useful in reconstructing old plats, as many of these features are vestiges of property boundaries that date back hundreds of years. Fiscal Year 2015: Information Not Available. Fiscal Year 2016: No Current Data Available.

CRITERIA FOR SELECTING PROPOSALS:

Relevance to announced priorities, technical evaluation factors, and prospect of attaining program objectives.

Award Procedure:

When the property has been investigated, findings, in the form of a thorough NHL nomination form, are presented to the National Park System Advisory Board which evaluates the property's national significance and high integrity and recommends a final action to the Secretary of the Interior. Owners of proposed landmarks are contacted prior to a landmark study, given an opportunity to comment on a final study, and then notified after designation of the landmark.

TYPES OF ASSISTANCE:

ADVISORY SERVICES AND COUNSELING

USES AND USE RESTRICTIONS:

Professional advice is provided in determining whether a property qualifies for inclusion in the National Register according to the Criteria for Evaluation contained in 36 CFR Part 60. Listing does not affect the range of actions an owner may take, as long as Federal funding, licensing or assistance is not involved and no governmental unit receives any authority or control over the property, including its use and disposition. However, if a Federal project might have an effect on a property listed or eligible for listing, the agency involved must provide the Advisory Council on Historic Preservation a reasonable opportunity to comment pursuant to 36 CFR Part 800. Registered properties also become eligible to receive grants from the Historic Preservation grant-in-aid program of the Department of the Interior (see 15.904), when funding is available, to receive home improvement loans from the Department of Housing and Urban Development under Title I of the National Housing Act as amended on October 18, 1974, or to participate in the community grant program provided by the Housing and Community Development Act of 1974. Major Federal tax advantages can be received on certain rehabilitation expenditures for "certified historic structures" and for charitable contributions for conservation purposes of partial interests in historic properties.

Applicant Eligibility:

Eligible applicants are the States and territories as defined in the National Historic Preservation Act, operating under programs administered by State Historic Preservation Officers appointed by the Governors (listed in Appendix IV of the Catalog); or the Tribal Preservation Officers; Federal agencies required to nominate and consider historic properties within their jurisdiction or as a result of the National Environmental Policy Act of 1969 and Executive Order 11593, and the National Historic Preservation Act operating under programs administered by representatives (listed in Appendix IV of the Catalog) appointed by the heads of the agencies; and, in States without approved State Historic Preservation Programs, persons and local governments. Applicants eligible for Federal Tax benefits include owners of individually listed properties and properties certified by the Secretary of Interior as being historic and in a district certified as historic.

Beneficiary Eligibility:

Public and private owners of historic properties listed in the National Register of Historic Places or of properties certified by the Secretary of Interior as being historic and in a district certified as historic.

Credentials/Documentation:

Nominations are submitted on standard nomination forms provided upon request to the State Historic Preservation Officers, Federal Preservation Officers, and Tribal Preservation Officers who must certify that each property was properly nominated. Procedures for National Register nominations are found in 36 CFR Part 60. Request for determinations of eligibility must be adequately documented as described in Appendix A of 36 CFR Part 63. Requests for certification of historic properties must be documented as described in Section 36 CFR Part 67 and requests for certification of State and local statutes and districts must be documented as described in Section 36 CFR Part 67. To participate in the program, each State must have an approved review board, an approved State staff, and an accepted State historic preservation plan. This program is excluded from coverage under 2 CFR 200, Subpart E - Cost Principles.

Preapplication Coordination:

For National Register nominations the signature of the State Historic

Preservation Officer on the nomination form certifies that the State review board has reviewed the nomination and that all applicable procedures, including notification to the property owner at least once during the nomination process, have been followed. The signature of the Federal Preservation Officer for Federal property or the Tribal Preservation Officer on Tribal lands on the nomination form certifies that the property has been nominated in compliance with the National Historic Preservation Act. Environmental impact information is not required for this program. This program is excluded from coverage under E.O. 12372.

Application Procedures:

This program is excluded from coverage under 2 CFR 200, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards. Anyone may prepare a National Register nomination. After the property is approved by the State Historic Preservation Officer, Tribal Preservation Officer, or Federal Preservation Officer, the nomination form or letter of request for a determination of eligibility should be forwarded to the Keeper of the National Register, National Park Service, Department of the Interior, 1849 C Street, NW, Mail Stop 2280, Washington, DC 20240. Nominations submitted for review are announced in the Federal Register to provide a period of comment. Documentation for certification for Federal tax benefits of historic buildings and structures, State and local statutes and districts should be forwarded to the appropriate State Historic Preservation Office, which sends it to the appropriate National Park Service Office.

Award Procedure:

The professional review staff of the National Register determines whether the properties meet the National Register criteria as contained in 36 CFR Part 60. Properties that meet the criteria are then officially listed in the National Register and become eligible for Federal tax benefits and Historic Preservation Fund grants when they are available.

Deadlines:

Not Applicable.

Range of Approval/Disapproval Time:

After nomination by State, 45 days at Federal level.

CRITERIA FOR SELECTING PROPOSALS:

Criteria for Evaluation: The following criteria are designed to guide the States and the Secretary of the Interior in evaluating potential entries (other than areas of the National Park System and National Historic Landmarks) to the National Register: The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, building, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and; (A) that are associated with events that have made a significant contribution to the broad patterns of our history; or (B) that are associated with the lives of persons significant in our past; or (C) that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or (D) that have yielded, or may be likely to yield, information important in prehistory or history. Ordinarily cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the past 50 years shall not be considered eligible for the National Register. However, such properties will qualify if they are integral parts of districts that do meet the criteria or if they fall within the following categories. (A) a religious property deriving primary significance from architectural or artistic distinction or historical importance; or (B) a building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or (C) a birthplace or grave of a historical figure of outstanding importance if there is no other appropriate site or building directly associated with his productive life; or (D) a cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events; or (E) a reconstructed building when accurately

executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or (F) a property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own historical significance, or (G) a property achieving significance within the past 50 years if it is of exceptional importance.

TYPES OF ASSISTANCE:

PROJECT GRANTS

USES AND USE RESTRICTIONS:

Land acquisition and development grants may be used for a wide range of

outdoor recreation projects, such as picnic areas, inner city parks, campgrounds, tennis courts, boat launching ramps, bike trails, swimming pools, playing fields, and support facilities such as roads, water supply, etc. Facilities must be open to the general public and not limited to special groups. Every park or outdoor recreation area acquired or developed with assistance under this program must remain available and accessible for public outdoor recreation use forever. Development of basic rather than elaborate facilities is favored. Operation and maintenance of facilities are not eligible expenses for funding. States only are also eligible to apply for grants to revise and update existing SCORPs; prepare new SCORPs; conduct statewide surveys, technical studies, data collection and analysis; and for other planning purposes that are clearly related to SCORP refinement and improvement.

Applicant Eligibility:

For planning grants, only the State agency formally designated by the Governor or State law as responsible for the preparation and maintenance of the SCORP is eligible to apply. (Treated as States for this purpose are the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, the Northern Mariana Islands, and Guam.) For acquisition and development grants, the above designated agency may apply for assistance for itself, or on behalf of other State agencies or political subdivisions, such as cities, counties, and park districts. Additionally, Indian tribes that are organized to govern themselves and perform the functions of a general purpose unit of government qualify for assistance. Individuals, nonprofit organizations, and private organizations are not eligible.

Beneficiary Eligibility:

The general public. For planning grants, same as Applicant Eligibility.

Credentials/Documentation:

The State Liaison Officer (SLO), who is appointed by the Governor or designated in State legislation to administer the program in the State or Territory, must provide assurance that the project is consistent with the SCORP; i.e., that it meets high priority recreation needs shown in the action program portion of the Plan. The State must have a sufficient balance of LWCF funding and the required match available for the project. The sponsoring agency must permanently dedicate the project to public outdoor recreation and assume responsibility for its operation and maintenance. SCORPs must cite the State's legal authority to participate in the Land and Water Conservation Fund program. Eligibility of costs will be determined in accordance with OMB Circular A-102 (43 CFR Part 12, Subpart C), "Uniform Administrative Requirements for Grants and Cooperative Agreements to State and Local Governments" and OMB Circular A-87, Cost Principles for State, Local and Indian Tribal Governments. OMB Circular No. A-87 applies to this program. 2 CFR 200, Subpart E - Cost Principles applies to this program.

Preapplication Coordination:

The SLO has the prerogative for initial determination of project eligibility, priority need, and order of fund assistance within the State. All project proposals are submitted to the National Park Service by the SLO. Environmental impact information is required for this program; a screening form is used to determine whether an EA or EIS is necessary. This program is eligible for coverage under E.O. 12372, "Intergovernmental Review of Federal Programs." If the State has selected the program for review, the applicant should consult the office or official designated as the single point of contact in his or her State for more information on the process the State requires when applying for federal assistance. Proposal budgets

must comport with OMB Circulars A-87 and A-102. Basic environmental information or evaluation is required and will be assessed by the National Park Service to determine whether an environmental impact statement is needed. This program is eligible for coverage under E.O. 12372, "Intergovernmental Review of Federal Programs." If the State has selected the program for review, the applicant should consult the office or official designated as the single point of contact in his or her State for more information on the process the State requires when applying for federal assistance.

Award Procedure:

Proposals are reviewed by the NPS field office, where final action may be taken. All grants are made to the State lead agency and if applicable passed through to the project sponsor, whether State or local government.

Deadlines:

Not Applicable.

Range of Approval/Disapproval Time:

Approximately 30-60 days for acquisition and development projects; 60 days for planning projects.

Appeals:

State may appeal to the Secretary of the Interior.

Renewals:

Project agreements may be amended to change the scope, funding amount, or duration. Must be approved by the National Park Service.

Formula and Matching Requirements:

Statutory Formula: Each year, States and Territories receive an overall allocation of funds based on a statutory formula. Depending on the amount appropriated by Congress, a certain percentage (forty percent of appropriations of up to \$225 million, thirty percent of the next \$275 million, and twenty percent of any additional appropriation) is split equally among the 51 States (for this purpose American Samoa, the District of Columbia, Guam, the Northern Mariana Islands, Puerto Rico, and the Virgin Islands are treated as one State and split an apportionment). The remaining percentage is apportioned on the basis of need.

Matching Requirements: Matching Requirements: The Land and Water Conservation Fund Act requires that the share of federal funds not exceed 50 percent of the total project cost. Generally, match must be derived from State, local, or private sources, but under certain conditions all or part of the project sponsor's matching share may be from other Federal assistance programs, such as Community Development Block Grants, when such use is allowable under the other programs sponsoring legislation. Otherwise, no other Federal funds may be applied to the project cost, even if all matching requirements are met. MOE requirements are not applicable to this program.

Length and Time Phasing of Assistance:

Funds are available for obligation during the fiscal year in which they are appropriated and for the two following fiscal years. The assistance period for individual projects varies and may be extended but on average is three years. Complex projects may be broken down into stages, with one being initially approved and the remainder qualified for activation at a later date. Except for project preparation costs, all costs must be incurred within the project period to be eligible for reimbursement. Planning projects may not be phased. See the following for information on how assistance is awarded/released: On an average of three years.

Reports:

Program reports are not applicable. Cash reports are not applicable. All projects are monitored for progress through consolidated performance reports, which should be at least annually. State inspection reports are submitted every 5 years on completed projects stating whether the properties acquired and/or developed with fund assistance are still being used in accordance with the agreement.
